

Microwave Radar Distance Sensor

OVERVIEW:

The Dragino MDS200 series is a **Microwave Radar distance sensor**. It uses **24Ghz Microwave** to detect the distance between sensor and different objects, and uploads the value via wireless to **LoRaWAN, NB-IoT or CAT-M1 Server**. Different from ultrasonic or Lidar measurement. Microwave Radar is more reliable for condensation / dusty environment. It can sense correct distance even there is water or thick dust on top of the sensor.

The Dragino MDS200 series can be applied to scenarios such as horizontal distance measurement, parking management system, object proximity and presence detection, intelligent trash can management system, robot obstacle avoidance, automatic control, sewer, etc.

It supports **BLE configure and wireless OTA update** which make user easy to use.

The Dragino MDS200 series is powered by **8500mAh Li-SOCI2 battery** or **solar panel with li-on battery**, it is designed for long-term use up to several years.

✓ microwave radar sense area

✓ works with heavy moisture

✓ works with dusty, soil over

✓ works out of container, through wood, plastic
