## Monitors indoor air quality

Numerous built-in sensors continuously analyze the atmosphere. Valuable data for occupant well-being

## Controls VOC emissions

Volatile Organic Compounds are very present in indoor air. The VOC sensor quickly identifies excessively high concentration levels

## Analyzes formaldehyde levels

Continuously monitors formaldehyde emissions to help you pinpoint the most exposed areas

## Presence detection

Motion sensor detects people up to 6 meters away. Useful for lighting, security or temperature control

## iZiAiR assesses Air Quality

This on-board algorithm simplifies the interpretation of the numerous data measured by the sensors. A useful and effective decision-making aid for healthier air

## Detects and measures ambient light

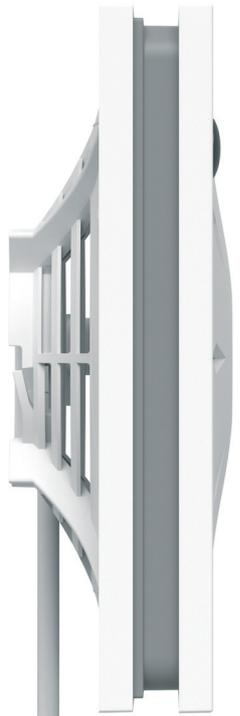

The brightness sensor measures the amount of light in the room. Useful for controlling lighting or adjusting temperature more quickly according to sunshine levels

## Sound under control

Measures noise and identifies noise pollution. Helps preserve a calm and peaceful environment

## Temperature | Humidity

For better indoor comfort. Measures ambient parameters in offices or homes
