

Industrial Router Pro Series

UR32

User Guide

Preface

Thanks for choosing Milesight UR32 industrial cellular router. The UR32 industrial cellular router delivers tenacious connection over network with full-featured design such as automated failover/failback, extended operating temperature, dual SIM cards, hardware watchdog, VPN, Fast Ethernet and beyond.

This guide describes how to configure and operate the UR32 industrial cellular router. You can refer to it for detailed functionality and router configuration.

Readers

This guide is mainly intended for the following users:

- Network Planners
- On-site technical support and maintenance personnel
- Network administrators responsible for network configuration and maintenance

Revision History

Date	Doc Version	Description
May. 16, 2019	V 1.1	Initial version
Nov. 14, 2019	V 1.2	Add Python, SMS, IP passthrough functions
May 11, 2020	V 1.3	Web interfaces upgrade
Dec. 9, 2020	V 2.0	Layout replace
Sept. 17, 2021	V 2.1	<ol style="list-style-type: none">1. Cellular and ping detection support IPv62. Add WAN connection type: DHCPv6 client, DS-Lite3. Add DHCPv6 Server feature4. Add IPv6 static routing feature5. Add Expert Option box in IPsec settings6. Support SMS inbox and outbox record clear

Chapter 1 Product Introduction

1.1 Overview

UR32 is an industrial cellular router with embedded intelligent software features that are designed for multifarious M2M/IoT applications. Supporting global WCDMA and 4G LTE, UR32 provides drop-in connectivity for operators and makes a giant leap in maximizing uptime.

Adopting high-performance and low-power consumption industrial grade CPU and wireless module, the UR32 is capable of providing wire-speed network with low power consumption and ultra-small package to ensure the extremely safe and reliable connection to the wireless network.

Meanwhile, the UR32 also supports Fast Ethernet ports, serial port (RS232/RS485) and I/O (input/output), which enables you to scale up M2M application combining data and video in limited time and budget.

UR32 is particularly ideal for smart grid, digital media installations, industrial automation, telemetry equipment, medical device, digital factory, finance, payment device, environment protection, water conservancy and so on.

For details of hardware and installation, please check UR32 Quick Start Guide.

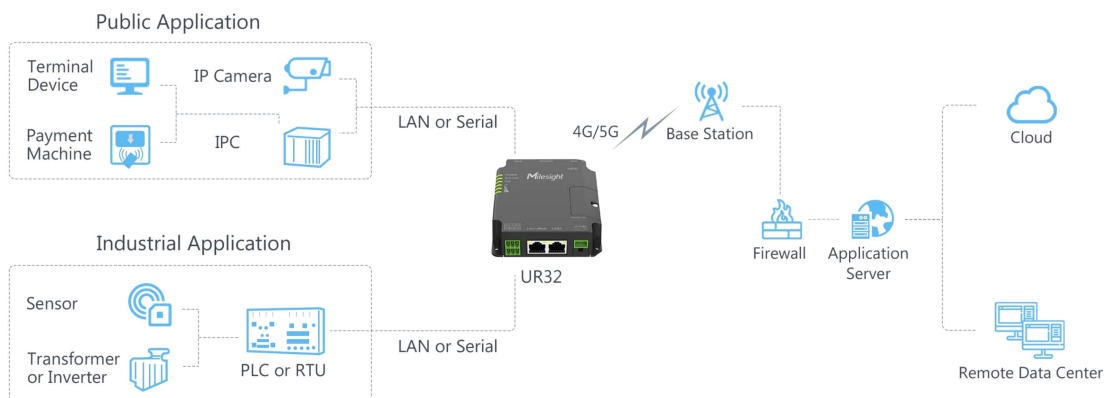

Figure 1-1

1.2 Advantages

Benefits

- Built-in industrial strong NXP CPU, big memory
- Fast Ethernet for fast data transmission
- Dual SIM cards for backup between multiple carriers networking and global 2G/3G/LTE options make it easy to get connected
- Equipped with Ethernet, I/O, serial port, Wi-Fi, GPS for connecting diverse field assets
- Embedded Python SDK for second development
- Rugged enclosure, optimized for DIN rail or shelf mounting
- 3-year warranty included

Security & Reliability

- Automated failover/failback between Ethernet and Cellular (dual SIM)
- Enable unit with security frameworks like IPsec/OpenVPN/GRE/L2TP/PPTP/ DMVPN
- Embed hardware watchdog, automatically recovering from various failure, and ensuring highest level of availability
- Establish a secured mechanism on centralized authentication and authorization of device access by supporting AAA (TACACS+, Radius, LDAP, local authentication) and multiple levels of user authority

Easy Maintenance

- Milesight DeviceHub provides easy setup, mass configuration, and centralized management of remote devices
- The user-friendly web interface design and several upgrade options help administrator to manage the device as easy as pie
- Web GUI and CLI enable the admin to achieve simple management and quick configuration among a large quantity of devices
- Efficiently manage the remote routers on the existing platform through the industrial standard SNMP

Capabilities

- Link remote devices in an environment where communication technologies are constantly changing
- Industrial 32-bit ARM Cortex-A7 processor, high-performance operating up to 528MHz and 128 MB memory available to support more applications
- Support rich protocols like SNMP, Modbus bridging, RIP, OSPF
- Support wide operating temperature ranging from -40°C to 70°C/-40°F to 158°F

1.3 Specifications

Hardware System	
CPU	528MHz, 32-bit ARM Cortex-A7
Memory	128 MB Flash, 128 MB DDR3 RAM
Storage	1 × Micro SD
Cellular Interfaces	
Connectors	2 × 50 Ω SMA (Center pin: SMA Female)
SIM Slots	2

Wi-Fi Interface (Optional)

Connectors	1 × 50 Ω SMA (Center pin: RP-SMA Female)
Standards	IEEE 802.11 b/g/n
Tx Power	802.11b: 16 dBm +/-1.5 dBm (11 Mbps) 802.11g: 14 dBm +/-1.5 dBm (54 Mbps) 802.11n: 13 dBm +/-1.5 dBm (65 Mbps, HT20/40 MCS7)
Modes	Support AP and Client mode, multiple SSID
Security	WPA/WPA2 authentication, WEP/TKIP/AES encryption

GPS (Optional)

Connectors	1 × 50 Ω SMA (Center pin: SMA Female)
Protocols	NMEA 0183, PMTK

Ethernet

Ports	2 × RJ-45 (PoE PSE Optional)
Physical Layer	10/100 Base-T (IEEE 802.3)
Data Rate	10/100 Mbps (auto-sensing)
Interface	Auto MDI/MDIX
Mode	Full or half duplex (auto-sensing)

Serial Interface

Ports	1 × RS232 (RS485 Optional)
Connector	Terminal block
Baud Rate	300bps to 230400bps

IO

Connector	Terminal block
Digital	1 × DI + 1 × DO

Software

Network Protocols	IPv4/IPv6, PPP, PPPoE, SNMP v1/v2c/v3, TCP, UDP, DHCP, RIPv1/v2, OSPF, DDNS, VRRP, HTTP, HTTPS, DNS, ARP, QoS, SNTP, Telnet, VLAN, SSH, etc.
VPN Tunnel	DMVPN/IPsec/OpenVPN/PPTP/L2TP/GRE
Access Authentication	CHAP/PAP/MS-CHAP/MS-CHAPV2
Firewall	ACL/DMZ/Port Mapping/MAC Binding/SPI/DoS&DDoS Protection /IP Passthrough
Management	Web, CLI, SMS, On-demand dial up, DeviceHub
AAA	Radius, TACACS+, LDAP, Local Authentication

Multilevel Authority	Multiple levels of user authority
Reliability	VRRP, WAN Failover, Dual SIM Backup
Serial Port	Transparent (TCP Client/Server, UDP), Modbus Gateway (Modbus RTU to Modbus TCP)
Power Supply and Consumption	
Connector	2-pin with 5.08 mm terminal block
Input Voltage	9-48 VDC
Power Consumption	Typical 1.9 W, Max 2.4 W (In Non-PoE mode)
Power Output	2 × 802.3 af/at PoE output
Physical Characteristics	
Ingress Protection	IP30
Housing & Weight	Metal, 271 g
Dimensions	108 x 90 x 26 mm (4.25 x 3.54 x 1.02 in)
Mounting	Desktop, wall or DIN rail mounting
Others	
Reset Button	1 × RESET
LED Indicators	1 × POWER, 1 × SYSTEM, 1 × SIM, 3 × Signal strength
Built-in	Watchdog, Timer
Environmental	
Operating Temperature	-40°C to +70°C (-40°F to +158°F) Reduced cellular performance above 60°C
Storage Temperature	-40°C to +85°C (-40°F to +185°F)
Ethernet Isolation	1.5 kV RMS
Relative Humidity	0% to 95% (non-condensing) at 25°C/77°F

1.4 Dimensions (mm)

Figure 1-2

Chapter 2 Access to Web GUI

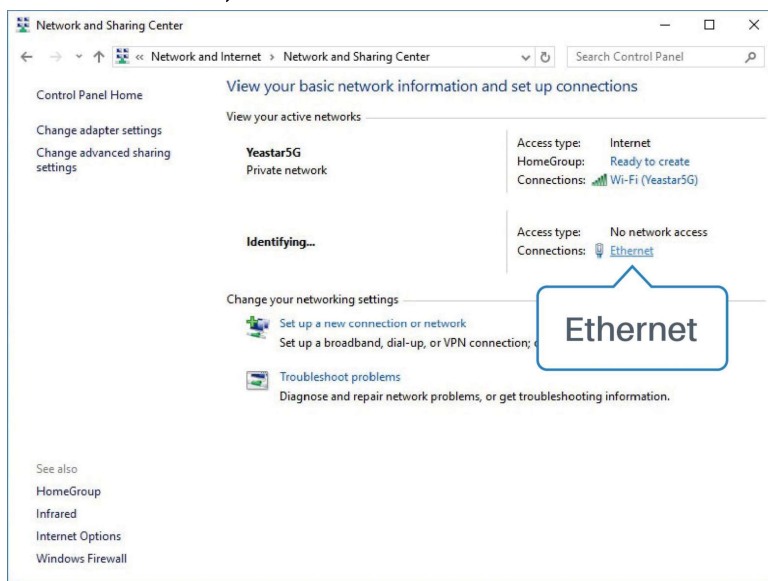

This chapter explains how to access to Web GUI of the UR32 router. Connect PC to LAN port of UR32 router directly. The following steps are based on Windows 10 operating system for your reference.

Username: **admin**

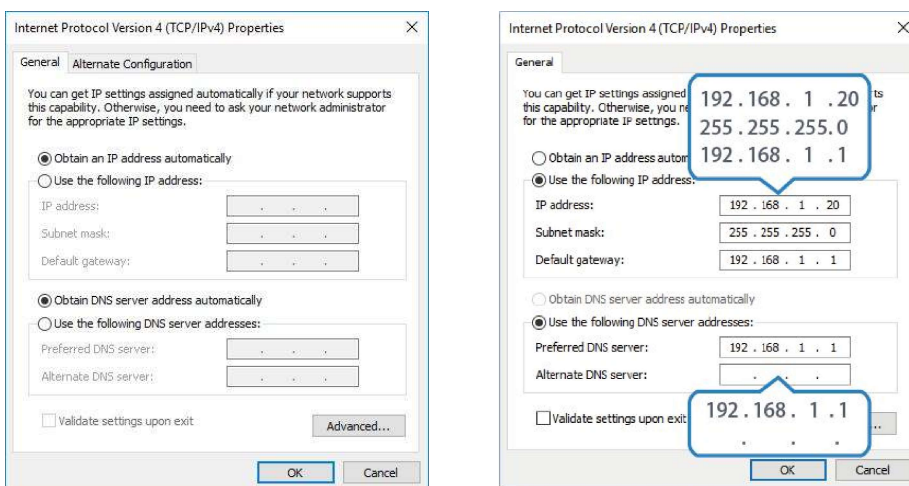

Password: **password**

IP Address: **192.168.1.1**

1. Go to "Control Panel" → "Network and Internet" → "Network and Sharing Center", then click "Ethernet" (May have different names).

2. Go to "Properties" → "Internet Protocol Version 4(TCP/IPv4) ", select "Obtain an IP address automatically" or "Use the following IP address", then assign a static IP manually within the same subnet of the device.

3. Open a Web browser on your PC (Chrome is recommended), type in the IP address 192.168.1.1, and press Enter on your keyboard.
4. Enter the username, password, and click "Login".

Username

Password

Login

! If you enter the username or password incorrectly more than 5 times, the login page will be locked for 10 minutes.

5. When you login with the default username and password, you will be asked to modify the password. It's suggested that you change the password for the sake of security. Click "Cancel" button if you want to modify it later.

Change Password ✕

Old Password

New Password

Confirm New Password

Save
Cancel

6. After you login the Web GUI, you can view system information and perform configuration on the router.

The screenshot shows the Milesight Web GUI interface. At the top, there is a navigation bar with the Milesight logo and a user profile icon labeled 'admin'. Below the navigation bar, there is a warning message: "For your device security, please change the default password". The main content area is divided into several sections:

- System Information:**
 - Model: UR32-L00AU-485
 - Serial Number: 6218A1757711
 - Firmware Version: 32.3.0.2
 - Hardware Version: V2.0
- System Status:**
 - Local Time: 2021-09-22 17:47:31 Wednesday
 - Uptime: 00:07:21
 - CPU Load: 13%
 - RAM (Available/Capacity): 37MB/128MB(28.91%)
 - Flash (Available/Capacity): 90MB/128MB(70.31%)
- Cellular:**
 - Status: No SIM Card
 - Current SIM: SIM2
 - IPV4: 0.0.0.0/0
 - IPV6: 24.e1.24.f0.b7.16
 - Connection Duration: 0 days, 00:00:00
 - Data Usage Monthly: 0.0 MB
- LAN:**
 - IPV4: 192.168.0.1/24
 - IPV6: fe80::948b:7ff:feed:c2fa:64
 - Connected Devices: 0
- WAN:**
 - Status: Online
 - IPV4: 192.168.22.105/24
 - IPV6: fe80::26a1:24ff:fe0b:714:64
 - MAC: 24.e1.24.f0.b7.16
 - Connection Duration: 0 days, 00:06:07

At the bottom right, there are buttons for "Manual Refresh" and "Refresh".

Chapter 3 Web Configuration

3.1 Status

3.1.1 Overview

You can view the system information of the router on this page.

3.1.3 Network

On this page you can check the WAN and LAN status of the router.

WAN-IPv4						
Port	Status	Type	IPv4	Gateway	DNS	Connection Duration
LAN1/WAN	up	Static	192.168.22.210/24	192.168.22.1	114.114.114.114	08h 32m 53s

WAN-IPv6						
Port	Status	Type	IPv6	Gateway	DNS	Connection Duration
LAN1/WAN	up	Static	fe80::26e1:24ff:fe11:2fea/64	-	-	08h 32m 53s

Figure 3-1-3-1

WAN Status	
Item	Description
Port	Show the name of WAN port.
Status	Show the status of WAN port. "up" refers to a status that WAN is enabled and Ethernet cable is connected. "down" means Ethernet cable is disconnected or WAN function is disabled.
Type	Show the dial-up connection type of WAN port.
IPv4/IPv6	Show the IPv4 address with netmask or IPv6 address with prefix-length of WAN port.
Gateway	Show the gateway of WAN port.
DNS	Show the DNS of WAN port.
Connection Duration	Show the information on how long the Ethernet cable has been connected on WAN port when WAN function is enabled. Once WAN function is disabled or Ethernet connection is disconnected, the duration will stop.

Bridge	
Item	Description
Name	Show the name of the bridge interface.
STP	Show if STP is enabled.
IPv4/IPv6	Show the IPv4/IPv6 address and netmask of the bridge interface.
Netmask	Show the Netmask of the bridge interface.
Members	Show the members of the bridge interface.

Table 3-1-3-2 Bridge Status

3.1.4 WLAN (Only Applicable to Wi-Fi Version)

You can check Wi-Fi status on this page, including the information of access point and client.

WLAN Status					
Name	Status	Type	SSID	IP Address	Netmask
WLAN	Running	AP	Router_F02FEB	192.168.1.1	255.255.255.0

Associated Stations			
SSID	MAC Address	IP Address	Connection Duration

Figure 3-1-4-1

WLAN Status	
Item	Description
WLAN Status	
Name	Show the name of the Wi-Fi interface .
Status	Show the status of the Wi-Fi interface.
Type	Show the Wi-Fi interface type.
SSID	Show the SSID of the router when the interface type is AP. Show the SSID of AP which the router connected to when the interface type is Client.
IP Address	Show the IP address of the router when the interface type is AP. Show the IP address of AP which the router connected to when the interface type is Client.
Netmask	Show the netmask of the router when the interface type is AP. Show the netmask of AP which the router connected to when the interface type is Client.
Associated Stations	
SSID	Show the SSID of the router when the interface type is AP. Show the SSID of AP which the router connected to when the interface type is Client.
MAC Address	Show the MAC address of the client which connected to the router when the interface type is AP. Show the MAC address of the AP which the router connected to when the interface type is Client.
IP Address	Show the IP address of the client which connected to the router when the interface type is AP. Show the IP address of the AP which the router connected to when the interface type is Client.
Connection Duration	Show the connection duration between client device and router when the interface type is AP. Show the connection duration between router and the AP when the interface type is Client.

Table 3-1-4-1 WLAN Status

3.1.5 VPN

You can check VPN status on this page, including PPTP, L2TP, IPsec, OpenVPN and DMVPN.

Overview	Cellular	Network	WLAN	VPN	Routing	Host List
Clients						
Name	Status	Local IP	Remote IP			
Server						
Name	Status					
OpenVPN Server	Disabled					
Ipsec Server	Disabled					
Connected List						
Server Type	Client IP	Duration				

Figure 3-1-5-1

VPN Status	
Item	Description
Clients	
Name	Show the name of the enabled VPN clients.
Status	Show the status of client. "Connected" refers to a status that client is connected to the server. "Disconnected" means client is disconnected to the server.
Local IP	Show the local IP address of the tunnel.
Remote IP	Show the real remote IP address of the tunnel.
Server	
Name	Show the name of the enabled VPN Server.
Status	Show the status of Server.
Connected List	
Server Type	Show the type of the server.
Client IP	Show the IP address of the client which connected to the server.
Duration	Show the information about how long the client has been connected to this server when the server is enabled. Once the server is disabled or connection is disconnected, the duration will stop counting.

Table 3-1-5-1 VPN Status

3.1.6 Routing

You can check routing status on this page, including the routing table and ARP cache.

Routing Table					
Destination	Netmask/Prefix Length	Gateway	Interface	Metric	
0.0.0.0	0.0.0.0	192.168.22.1	WAN	1	
127.0.0.0	255.0.0.0	-	Loopback	-	
192.168.1.0	255.255.255.0	-	Bridge0	-	
192.168.22.0	255.255.255.0	-	WAN	-

192.168.23.77	24:4b:fe:8d:95:ab	WAN

Figure 3-1-6-1

Item	Description
Routing Table	
Destination	Show the IP address of destination host or destination network.
Netmask/Prefix Length	Show the netmask or prefix length of destination host or destination network.
Gateway	Show the IP address of the gateway.
Interface	Show the outbound interface of the route.
Metric	Show the metric of the route.
ARP Cache	
IP	Show the IP address of ARP pool.
MAC	Show the IP address's corresponding MAC address.
Interface	Show the binding interface of ARP.

Table 3-1-6-1 Routing Information

3.1.7 Host List

You can view the host information on this page.

The screenshot shows a navigation menu at the top with tabs: Overview, Cellular, Network, VPN, Routing, and Host List. Below the menu, there are two expandable sections:

- DHCP Leases:** A table with three columns: IP, MAC/DUID, and Lease Remaining Time.
- MAC Binding:** A table with two columns: IP and MAC/DUID.

Figure 3-1-7-1

Host List	
Item	Description
DHCP Leases	
IP Address	Show IP address of DHCP client
MAC/DUID	Show MAC address of DHCPv4 client or DUID of DHCPv6 client.
Lease Time Remaining	Show the remaining lease time of DHCP client.
MAC Binding	
IP & MAC	Show the IP address and MAC address set in the Static IP list of DHCP service.

Table 3-1-7-1 Host List Description

3.1.8 GPS (Only Applicable to GPS Version)

When GPS function is enabled and the GPS information is obtained successfully, you can view the latest GPS information including GPS Time, Latitude, Longitude and Speed on this page.

The screenshot shows the 'GPS Status' section with the following data:

GPS Status	
Status	Weak Signal
Time for Locating	-
Satellites In Use	-
Satellites In View	-
Latitude	-
Longitude	-
Altitude	-
Speed	-

Figure 3-1-8-1

GPS Status	
Item	Description
Status	Show the status of GPS.
Time for Locating	Show the time for locating.
Satellites In Use	Show the quantity of satellites in use.
Satellites In View	Show the quantity of satellites in view.
Latitude	Show the Latitude of the location.
Longitude	Show the Longitude of the location.
Altitude	Show the Altitude of the location.
Speed	Show the speed of movement.

Table 3-1-8-1 GPS Status Description

3.2 Network

3.2.1 Interface

3.2.1.1 Link Failover

This section describes how to configure link failover strategies, their priority and the ping settings, each rule owns its own ping rules by default. Router will follow the priority to choose the next available interface to access the internet, make sure you have enable the full interface that you need to use here. If priority 1 can only use IPv4, UR32 will select a second link which IPv6 works as main IPv6 link and vice versa.

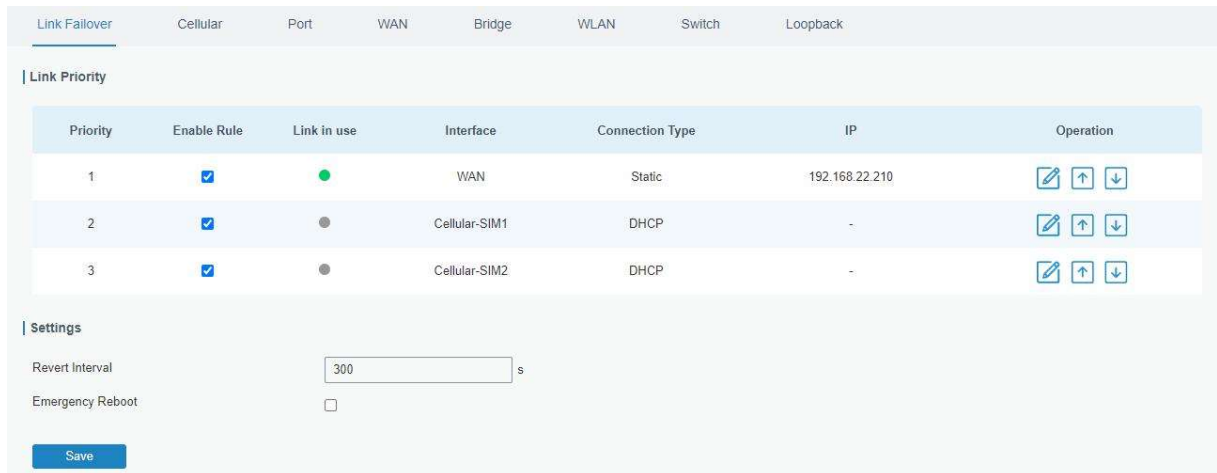

Figure 3-2-1-1

Link Failover	
Item	Description
Link Priority	
Priority	Display the priority of each interface, you can modify it by the operation's up and down button.
Enable Rule	If enabled, the router will choose this interface into its switching rule. For the Cellular interface, if it's not enabled here, the interface will be disabled as well.

Link In Use	Mark whether this interface is in use with Green color
Interface	Display the name of the interface.
Connection type	Display how to obtain the IP address in this interface, like static IP or DHCP.
IP	Display the IP address of the interface.
Operation	You can change the priority of the rules and configure the ping detection rules here.
Settings	
Revert Interval	Specify the number of seconds to waiting for switching to the link with higher priority, 0 means disable the function.
Emergency Reboot	Enable to reboot the device if no link is available.

Table 3-2-1-1 Link Failover Parameters

Ping Detection

IPv4 Secondary Server

IPv6 Primary Server

IPv6 Secondary Server

Interval s

Retry Interval s

Timeout s

Max Ping Retries

OK Cancel

Figure 3-2-1-2

Ping Detection	
Item	Description
Enable	If enabled, the router will periodically detect the connection status of the link.
IPv4/IPv6 Primary Server	The router will send ICMP packet to the IPv4/IPv6 address or hostname to determine whether the Internet connection is still available or not.
IPv4/IPv6 Secondary Server	The router will try to ping the secondary server name if primary server is not available.
Interval	Time interval (in seconds) between two Pings.
Retry Interval	Set the ping retry interval. When ping failed, the router will ping again in every retry interval.
Timeout	The maximum amount of time the router will wait for a

	response to a ping request. If it does not receive a response for the amount of time defined in this field, the ping request will be considered to have failed.
Max Ping Retries	The retry times of the router sending ping request until determining that the connection has failed.

Table 3-2-1-2 Ping Detection Parameters

3.2.1.2 Cellular

This section explains how to set the related parameters for cellular network. The UR32 cellular router has two cellular interfaces, namely SIM1 and SIM2. Only one cellular interface is active at one time. If both cellular interfaces are enabled, it will follow the priority rule configured in 'Link Failover' page.

The screenshot displays the 'Cellular Settings' configuration page. At the top, there are tabs for 'Link Failover', 'Cellular', 'Port', 'WAN', 'Bridge', 'WLAN', 'Switch', and 'Loopback'. The 'Cellular' tab is selected. Below the tabs, there are two columns for 'SIM1' and 'SIM2'. Each column contains various settings: Protocol Type (dropdown menu set to IPv6), APN (text input), Username (text input), Password (text input), PIN Code (text input), Access Number (text input), Authentication Type (dropdown menu set to Auto), Network Type (dropdown menu set to Auto), PPP Preferred (checkbox, unchecked), SMS Center (text input), Enable NAT (checkbox, checked), Roaming (checkbox, checked), Data Limit (text input set to 0, followed by MB), and Billing Day (Day 1 of The Month). Below these columns, there is a 'Connection Setting' section with 'Connection Mode' (dropdown menu set to Always Online) and 'Re-dial Interval(s)' (text input set to 5).

Figure 3-2-1-3

Cellular Settings	
Item	Description
Protocol	Select from "IPv4", "IPv6" and "IPv4/IPv6".
APN	Enter the Access Point Name for cellular dial-up connection provided by local ISP.

Username	Enter the username for cellular dial-up connection provided by local ISP.
Password	Enter the password for cellular dial-up connection provided by local ISP.
PIN Code	Enter a 4-8 characters PIN code to unlock the SIM.
Access Number	Enter the dial-up center NO. For cellular dial-up connection provided by local ISP.
Authentication Type	Select from "Auto", "PAP", "CHAP", "MS-CHAP", and "MS-CHAPv2".
Network Type	Select from "Auto", "4G Only", "3G Only", and "2G Only". Auto: connect to the network with the strongest signal automatically. 4G Only: connect to 4G network only. And so on.
PPP Preferred	The PPP dial-up method is preferred.
SMS Center	Enter the local SMS center number for storing, forwarding, converting and delivering SMS message.
Enable NAT	Enable or disable NAT function.
Roaming	Enable or disable roaming.
Data Limit	When you reach the specified data usage limit, the data connection of currently used SIM card will be disabled. 0 means disable the function.
Billing Day	Choose the billing day of the SIM card, the router will reset the data used to 0.

Table 3-2-1-3 Cellular Parameters

Figure 3-2-1-4

Connection Setting	
Item	Description
Connection Mode	Select from "Always Online" and "Connect on Demand".
Re-dial Interval(s)	Set the interval to dial into ISP when it lost connection, the default value is

	5s.
Max Idle Times	Set the maximum duration of router when current link is under idle status. Range: 10-3600
Triggered by Call	The router will switch from offline mode to cellular network mode automatically when it receives a call from the specific phone number.
Call Group	Select a call group for call trigger. Go to "System > Phone&SMS > Phone" to set up phone group.
Triggered by SMS	The router will switch from offline mode to cellular network mode automatically when it receives a specific SMS from the specific mobile phone.
SMS Group	Select an SMS group for trigger. Go to "System > Phone&SMS > SMS" to set up SMS group.
SMS Text	Fill in the SMS content for triggering.
Triggered by IO	The router will switch from offline mode to cellular network mode automatically when the DI status is changed. Go to "Industrial > I/O > DI" to configure trigger condition.

3.2.1.3 Port

This section describes how to configure the Ethernet port parameters.

UR32 cellular router supports 2 Fast Ethernet ports.

Port	Status	Property	Speed	Duplex
LAN1/WAN	up	wan	auto	auto
LAN2	up	lan	auto	auto

Figure 3-2-1-5

Port Setting	
Item	Description
Port	Users can define the Ethernet ports according to their needs.
Status	Set the status of Ethernet port; select "up" to enable and "down" to disable.
Property	Show the Ethernet port's type, as a WAN port or a LAN port.
Speed	Set the Ethernet port's speed. The options are "auto", "100 Mbps",

	and "10 Mbps".
Duplex	Set the Ethernet port's mode. The options are "auto", "full", and "half".

Table 3-2-1-5 Port Parameters

3.2.1.4 WAN

WAN port can be connected with Ethernet cable to get Internet access. It supports 5 connection types.

- **Static IP:** configure IP address, netmask and gateway for Ethernet WAN interface.
- **DHCP Client:** configure Ethernet WAN interface as DHCP Client to obtain IP address automatically.
- **PPPoE:** configure Ethernet WAN interface as PPPoE Client.
- **DHCPv6 Client:** configure Ethernet WAN interface as DHCP Client to obtain IPv6 address automatically.
- **Dual-Stack Lite:** use IPv4-in-IPv6 tunneling to send terminal device's IPv4 packet through a tunnel on the IPv6 access network to the ISP.

The screenshot shows the WAN Settings configuration page. The left sidebar contains a navigation menu with categories like Status, Network, Interface, DHCP, Firewall, QoS, VPN, IP Passthrough, Routing, VRRP, DDNS, System, Industrial, and Maintenance. The main content area is titled 'WAN Settings' and shows the configuration for 'WAN_1'. The settings are as follows:

Setting	Value
Enable	<input checked="" type="checkbox"/>
Port	LAN1/WAN
Connection Type	Static IP
IPv4 Address	192.168.22.210
Netmask	255.255.255.0
IPv4 Gateway	192.168.22.1
IPv6 Address	fe80::26e1:24ff:fe1:2fea
Prefix Length	64
IPv6 Gateway	
MTU	1500
IPv4 Primary DNS	114.114.114.114
IPv4 Secondary DNS	8.8.8.8
IPv6 Primary DNS	
IPv6 Secondary DNS	
Enable NAT	<input checked="" type="checkbox"/>

Figure 3-2-1-6

WAN Setting		
Item	Description	Default
Enable	Enable WAN function.	Enable
Port	The port that is currently set as WAN port.	WAN

Connection Type	Select from "Static IP", "DHCP Client", "DHCPv6 Client", "Dual-Stack Lite" and "PPPoE".	Static IP
MTU	Set the maximum transmission unit.	1500
IPv4 Primary DNS	Set the primary IPv4 DNS server.	8.8.8.8
IPv4 Secondary DNS	Set the secondary IPv4 DNS server.	-- --
IPv6 Primary DNS	Set the primary IPv6 DNS server.	-- --
IPv6 Secondary DNS	Set the secondary IPv6 DNS server.	-- --
Enable NAT	Enable or disable NAT function. When enabled, a private IP can be translated to a public IP.	Enable

Table 3-2-1-6 WAN Parameters

1. Static IP Configuration

If the external network assigns a fixed IP for the WAN interface, user can select "Static IP" mode.

Figure 3-2-1-7

Static IP		
Item	Description	Default
IPv4 Address	Set the IPv4 address of the WAN port.	192.168.0.1
Netmask	Set the Netmask for WAN port.	255.255.255.0

IPv4 Gateway	Set the gateway for WAN port's IPv4 address.	192.168.0.2
IPv6 Address	Set the IPv6 address which can access Internet.	Generated from Mac address
Prefix-length	Set the IPv6 prefix length to identify how many bits of a Global Unicast IPv6 address are there in network part. For example, in 2001:0DB8:0000:000b::/64, the number 64 is used to identify that the first 64 bits are in network part.	64
IPv6 Gateway	Set the gateway for WAN port's IPv6 address. E.g.2001:DB8:ACAD:4::2.	--
Multiple IP Address	Set the multiple IP addresses for WAN port.	Null

Table 3-2-1-7 Static Parameters

2. DHCP Client/DHCPv6 Client

If the external network has DHCP server enabled and has assigned IP addresses to the Ethernet WAN interface, user can select "DHCP client" mode to obtain IP address automatically.

Figure 3-2-1-8

Figure 3-2-1-9

DHCP Client	
Item	Description
Use Peer DNS	Obtain peer DNS automatically during PPP dialing. DNS is necessary when visiting domain name.
DHCPv6 Client	
Request IPv6-address	Choose the ways to obtain the IPv6 address from the DHCP Server. Select from try, force, none. Try: The DHCP Server will assign specific address in priority. Force: The DHCP Server assigns specific address only. None: The DHCP Server will randomly assign address. The specific address is relevant to the prefix length of IPv6 address you set.
Request prefix length of IPv6	Set the prefix length of IPv6 address which router is expected to obtain from DHCP Server.

Table 3-2-1-8 DHCP Client Parameters

3. PPPoE

PPPoE refers to a point to point protocol over Ethernet. User has to install a PPPoE client on the basis of original connection way. With PPPoE, remote access devices can get control of each user.

Enable	<input checked="" type="checkbox"/>
Port	LAN1/WAN
Connection Type	PPPoE
Username	<input type="text"/>
Password	<input type="text"/>
Link Detection Interval(s)	60
Max Retries	0
MTU	1500
Use Peer DNS	<input type="checkbox"/>
IPv4 Primary DNS	114.114.114.114
IPv4 Secondary DNS	8.8.8.8
Enable NAT	<input checked="" type="checkbox"/>

Figure 3-2-1-10

PPPoE	
Item	Description
Username	Enter the username provided by your Internet Service Provider (ISP).

Password	Enter the password provided by your Internet Service Provider (ISP).
Link Detection Interval (s)	Set the heartbeat interval for link detection. Range: 1-600.
Max Retries	Set the maximum retry times after it fails to dial up. Range: 0-9.
Use Peer DNS	Obtain peer DNS automatically during PPP dialing. DNS is necessary when visiting domain name.

Table 3-2-1-9 PPPoE Parameters

4. Dual-Stack Lite

Dual-Stack Lite (DS-Lite) uses IPv4-in-IPv6 tunneling to send a subscriber's IPv4 packet through a tunnel on the IPv6 access network to the ISP. The IPv6 packet is decapsulated to recover the subscriber's IPv4 packet and is then sent to the Internet after NAT address and port translation and other LSN related processing. The response packets traverse through the same path to the subscriber.

Enable	<input checked="" type="checkbox"/>
Port	LAN1/WAN
Connection Type	Dual-Stack Lite
IPv6 Gateway	
DS-Lite AFTR Address	
Local IPv6 Address	
MTU	1500
IPv4 Primary DNS	114.114.114.114
IPv4 Secondary DNS	8.8.8.8
IPv6 Primary DNS	
IPv6 Secondary DNS	
Enable NAT	<input checked="" type="checkbox"/>

Figure 3-2-1-11

Dual-Stack Lite	
Item	Description
IPv6 Gateway	Set the gateway for WAN port's IPv6 address.
DS-Lite AFTR Address	Set the DS-Lite AFTR server address.
Local IPv6 Address	Set the WAN port IPv6 address which use the same subnet as IPv6 gateway.

Table 3-2-1-10 Dual-Stack Lite Parameters

Related Configuration Example

[Ethernet WAN Connection](#)

3.2.1.5 Bridge

Bridge setting is used for managing local area network devices which are connected to LAN ports of the UR32, allowing each of them to access the Internet.

The screenshot displays the 'Bridge Setting' configuration page. At the top, there are navigation tabs: Link Failover, Cellular, Port, WAN, Bridge (selected), WLAN, Switch, and Loopback. Below the tabs, the 'Bridge Setting' section includes the following fields:

- Name: Bridge0
- STP:
- IP Address: 192.168.1.1
- Netmask: 255.255.255.0
- IPv6 Address: 2004::1/64
- MTU: 1500

Below these fields is a section titled 'Multiple IP Address' which contains a table with columns for 'IP Address', 'Netmask', and 'Operation'. A blue plus button is located at the bottom right of this section to add new entries.

Figure 3-2-1-12

Bridge		
Item	Description	Default
Name	Show the name of bridge. "Bridge0" is set by default and cannot be changed.	Bridge0
STP	Enable/disable STP.	Disable
IP Address	Set the IP address for bridge.	192.168.1.1
Netmask	Set the Netmask for bridge.	255.255.255.0
IPv6 Address	Set the IPv6 address for bridge.	2004::1/64
MTU	Set the maximum transmission unit. Range: 68-1500.	1500
Multiple IP Address	Set the multiple IP addresses for bridge.	Null

Table 3-2-1-11 Bridge Settings

3.2.1.6 WLAN (Only Applicable to Wi-Fi Version)

This section explains how to set the related parameters for Wi-Fi network. UR32 supports 802.11 b/g/n, as AP or client mode.

Link Failover	Cellular	Port	WAN	Bridge	WLAN
WLAN					
Enable	<input checked="" type="checkbox"/>				
Work Mode	AP				
BSSID	24:e1:24:f0:2f:eb				
Radio Type	802.11n(2.4GHz)				
Channel	Auto				
Bandwidth	20MHz				
SSID	Router_F02FEB				
Encryption Mode	WPA-PSK/WPA2-PSK				
Cipher	Auto				
Key					
SSID Broadcast	<input checked="" type="checkbox"/>				
AP Isolation	<input type="checkbox"/>				
Guest Mode	<input type="checkbox"/>				
Max Client Number	128				

Figure 3-2-1-13

WLAN	
Item	Description
Enable	Enable/disable WLAN.
Work Mode	Select router's work mode. The options are "Client" or "AP".
Encryption Mode	Select encryption mode. The options are "No Encryption", "WEP Open System", "WEP Shared Key", "WPA-PSK", "WPA2-PSK" and "WPA-PSK/WPA2-PSK".
BSSID	Fill in the MAC address of the access point. Either SSID or BSSID can be filled to joint the network.
SSID	Fill in the SSID of the access point.
Client Mode	
Scan	Click "Scan" button to search the nearby access point.
SSID	Show SSID.
Channel	Show wireless channel.
Signal	Show wireless signal.
BSSID	Show the MAC address of the access point.

Cipher	Show the cipher of the access point.
Security	Show the encryption mode.
Frequency	Show the frequency of radio.
Join Network	Click the button to join the wireless network.
AP Mode	
Radio Type	Select Radio type. The options are "802.11b (2.4 GHz)", "802.11g (2.4 GHz)", "802.11n (2.4 GHz)".
Channel	Select wireless channel. The options are "Auto", "1", "2"....."11".
Cipher	Select cipher. The options are "Auto", "AES", "TKIP" and "AES/TKIP".
Key	Fill the pre-shared key of WPA encryption.
Bandwidth	Select bandwidth. The options are "20MHz" and "40MHz".
SSID Broadcast	When SSID broadcast is disabled, other wireless devices can't not find the SSID, and users have to enter the SSID manually to access to the wireless network.
AP Isolation	When AP isolation is enabled, all users which access to the AP are isolated without communication with each other.
Guest Mode	The internal network is not allowed to visit if the guest mode is enabled.
Max Client Number	Set the maximum number of client to access when the router is configured as AP.
IP Setting	
Protocol	Set the IP address in wireless network.
IP Address	Set the IP address in wireless network.
Netmask	Set the netmask in wireless network.
Gateway	Set the gateway in wireless network.

[Wi-Fi Application Example](#)

3.2.1.7 Switch

VLAN is a kind of new data exchange technology that realizes virtual work groups by logically dividing the LAN device into network segments.

The screenshot shows a configuration page for a switch. At the top, there are tabs for Link Fallover, Cellular, Port, WAN, Bridge, WLAN, Switch (selected), and Loopback. Below the tabs, there are two main sections: LAN Settings and VLAN Settings.

LAN Settings: A table with columns: Name, VLAN ID, IP Address, Netmask, MTU, and Operation. One entry is visible: Name: vlan1, VLAN ID: 1, IP Address: 192.168.1.1, Netmask: 255.255.255.0, MTU: 1500. There are delete and add icons for each entry.

VLAN Settings: A table with columns: VLAN ID, LAN 1, LAN 2, CPU, and Operation. One entry is visible: VLAN ID: 1, LAN 1: Close, LAN 2: Untagged, CPU: Tagged. There are delete and add icons for each entry.

Figure 3-2-1-15

Switch	
Item	Description
LAN Settings	
Name	Set interface name of VLAN.
VLAN ID	Select VLAN ID of the interface.
IP Address	Set IP address of LAN port.
Netmask	Set Netmask of LAN port.
MTU	Set the maximum transmission unit of LAN port. Range: 68-1500.
VLAN Settings	
VLAN ID	Set the label ID of the VLAN. Range: 1-4094.
LAN 1/2	Make the VLAN bind with the corresponding ports and select status from "Tagged", "Untagged" and "Close" for Ethernet frame on trunk link.
CPU	Control communication between VLAN and other networks.

Table 3-2-1-14 VLAN Trunk Parameters

3.2.1.8 Loopback

Loopback interface is used for replacing router's ID as long as it is activated. When the interface is DOWN, the ID of the router has to be selected again which leads to long convergence time of OSPF. Therefore, Loopback interface is generally recommended as the ID of the router.

Loopback interface is a logic and virtual interface on router. Under default conditions, there's no loopback interface on router, but it can be created as required.

The screenshot shows the 'Loopback' configuration page. At the top, there are navigation tabs: Link Failover, Cellular, Port, WAN, Bridge, WLAN, Switch, and Loopback. Under the 'Loopback Address' section, there are two input fields: 'IP Address' with the value '127.0.0.1' and 'Netmask' with the value '255.0.0.0'. Below this is the 'Multiple IP Addresses' section, which contains a table with columns for 'IP Address', 'Netmask', and 'Operation'. The table is currently empty, and there is a blue plus sign button to the right of the table. At the bottom left of the page, there is a blue 'Save' button.

Figure 3-2-1-16

Loopback		
Item	Description	Default
IP Address	Unalterable	127.0.0.1
Netmask	Unalterable	255.0.0.0
Multiple IP Addresses	Apart from the IP above, user can configure other IP addresses.	Null

Table 3-2-1-15 Loopback Parameters

3.2.2 DHCP

DHCP adopts Client/Server communication mode. The Client sends configuration request to the Server which feeds back corresponding configuration information and distributes IP address to the Client so as to achieve the dynamic configuration of IP address and other information.

3.2.2.1 DHCP Server/DHCPv6 Server

UR32 can be set as a DHCP server or DHCPv6 server to distribute IP address when a host logs on and ensures each host is supplied with different IP addresses. DHCP Server has simplified some previous network management tasks requiring manual operations to the largest extent. UR32 only supports stateful DHCPv6 when working as DHCPv6 server.

IP Address	Set a static and specific IP address for the DHCP client (it should be outside of the DHCP range).	Null

Table 3-2-2-1 DHCP Server Parameters

3.2.2.2 DHCP Relay

UR32 can be set as DHCP Relay to provide a relay tunnel to solve the problem that DHCP Client and DHCP Server are not in the same subnet.

Figure 3-2-2-3

DHCP Relay	
Item	Description
Enable	Enable or disable DHCP relay.
DHCP Server	Set DHCP server, up to 10 servers can be configured; separate them by blank space or ",".

Table 3-2-2-2 DHCP Relay Parameters

3.2.3 Firewall

This section describes how to set the firewall parameters, including security, ACL, DMZ, Port Mapping, MAC Binding and SPI.

The firewall implements corresponding control of data flow at entry direction (from Internet to local area network) and exit direction (from local area network to Internet) according to the content features of packets, such as protocol style, source/destination IP address, etc. It ensures that the router operate in a safe environment and host in local area network.

3.2.3.1 Security

Figure 3-2-3-1

Item	Description	Default
Prevent Attack		
DoS/DDoS Protection	Enable/disable Prevent DoS/DDoS Attack.	Disable
Access Service Control		
Port	Set port number of the services. Range: 1-65535.	--
Local	Access the router locally.	Enable
Remote	Access the router remotely.	Disable
HTTP	Users can log in the device locally via HTTP to	80

	access and control it through Web after the option is checked.	
HTTPS	Users can log in the device locally and remotely via HTTPS to access and control it through Web after option is checked.	443
TELNET	Users can log in the device locally and remotely via Telnet after the option is checked.	23
SSH	Users can log in the device locally and remotely via SSH after the option is checked.	22
FTP	Users can log in the device locally and remotely via FTP after the option is checked.	21
Website Blocking		
URL Blocking	Enter the HTTP address which you want to block.	
Keyword Blocking	You can block specific website by entering keyword. The maximum number of character allowed is 64.	

Table 3-2-3-1 Security Parameters

3.2.3.2 ACL

Access control list, also called ACL, implements permission or prohibition of access for specified network traffic (such as the source IP address) by configuring a series of matching rules so as to filter the network interface traffic. When router receives packet, the field will be analyzed according to the ACL rule applied to the current interface. After the special packet is identified, the permission or prohibition of corresponding packet will be implemented according to preset strategy.

The data package matching rules defined by ACL can also be used by other functions requiring flow distinction.

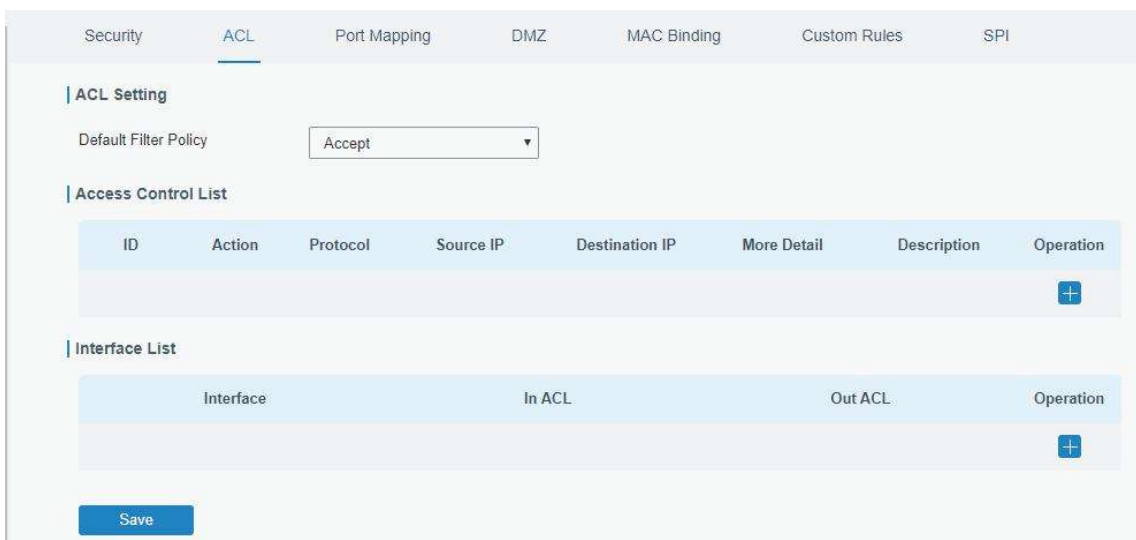

Figure 3-2-3-2

Item	Description
ACL Setting	

Default Filter Policy	Select from "Accept" and "Deny". The packets which are not included in the access control list will be processed by the default filter policy.
Access Control List	
Type	Select type from "Extended" and "Standard".
ID	User-defined ACL number. Range: 1-199.
Action	Select from "Permit" and "Deny".
Protocol	Select protocol from "ip", "icmp", "tcp", "udp", and "1-255".
Source IP	Source network address (leaving it blank means all).
Source Wildcard Mask	Wildcard mask of the source network address.
Destination IP	Destination network address (0.0.0.0 means all).
Destination Wildcard Mask	Wildcard mask of destination address.
Description	Fill in a description for the groups with the same ID.
ICMP Type	Enter the type of ICMP packet. Range: 0-255.
ICMP Code	Enter the code of ICMP packet. Range: 0-255.
Source Port Type	Select source port type, such as specified port, port range, etc.
Source Port	Set source port number. Range: 1-65535.
Start Source Port	Set start source port number. Range: 1-65535.
End Source Port	Set end source port number. Range: 1-65535.
Destination Port Type	Select destination port type, such as specified port, port range, etc.
Destination Port	Set destination port number. Range: 1-65535.
Start Destination Port	Set start destination port number. Range: 1-65535.
End Destination Port	Set end destination port number. Range: 1-65535.
More Details	Show information of the port.
Interface List	
Interface	Select network interface for access control.
In ACL	Select a rule for incoming traffic from ACL ID.
Out ACL	Select a rule for outgoing traffic from ACL ID.

Table 3-2-3-2 ACL Parameters

3.2.3.3 Port Mapping

Port mapping is an application of network address translation (NAT) that redirects a communication request from the combination of an address and port number to another while the packets are traversing a network gateway such as a router or firewall.

Click  to add a new port mapping rules.

Figure 3-2-3-3

Port Mapping	
Item	Description
Source IP	Specify the host or network which can access local IP address. 0.0.0.0/0 means all.
Source Port	Enter the TCP or UDP port from which incoming packets are forwarded. Range: 1-65535.
Destination IP	Enter the IP address that packets are forwarded to after being received on the incoming interface.
Destination Port	Enter the TCP or UDP port that packets are forwarded to after being received on the incoming port(s). Range: 1-65535.
Protocol	Select from "TCP" and "UDP" as your application required.
Description	The description of this rule.

Table 3-2-3-3 Port Mapping Parameters

Related Configuration Example

[NAT Application Example](#)

3.2.3.4 DMZ

DMZ is a host within the internal network that has all ports exposed, except those forwarded ports in port mapping.

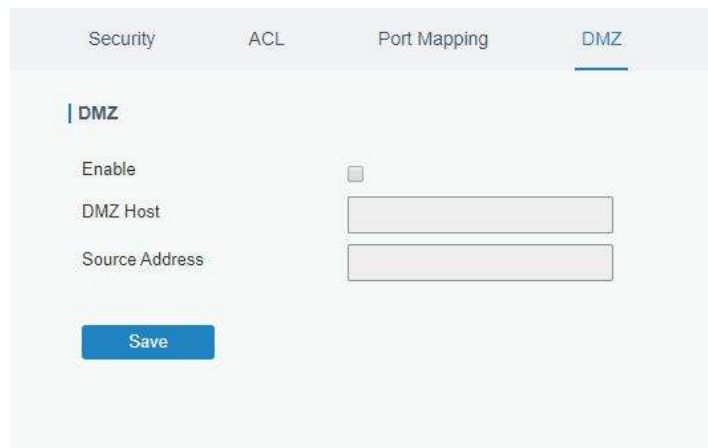

Figure 3-2-3-4

DMZ	
Item	Description
Enable	Enable or disable DMZ.
DMZ Host	Enter the IP address of the DMZ host on the internal network.
Source Address	Set the source IP address which can access to DMZ host. "0.0.0.0/0" means any address.

Table 3-2-3-4 DMZ Parameters

3.2.3.5 MAC Binding

MAC Binding is used for specifying hosts by matching MAC addresses and IP addresses that are in the list of allowed outer network access.

Figure 3-2-3-5

MAC Binding List	
Item	Description
MAC Address	Set the binding MAC address.
IP Address	Set the binding IP address.
Description	Fill in a description for convenience of recording the meaning of the binding rule for each piece of MAC-IP.

Table 3-2-3-5 MAC Binding Parameters

3.2.3.6 Custom Rules

In this page, you can configure your own custom firewall iptables rules.

Figure 3-2-3-6

Custom Rules	
Item	Description
Rule	Specify an iptables rule like the example shows. Tips: You must reboot the device to take effect after modifying or deleting the iptables rules.
Description	Enter the description of the rule.

Table 3-2-3-6 Custom Rules Parameters

3.2.3.7 SPI

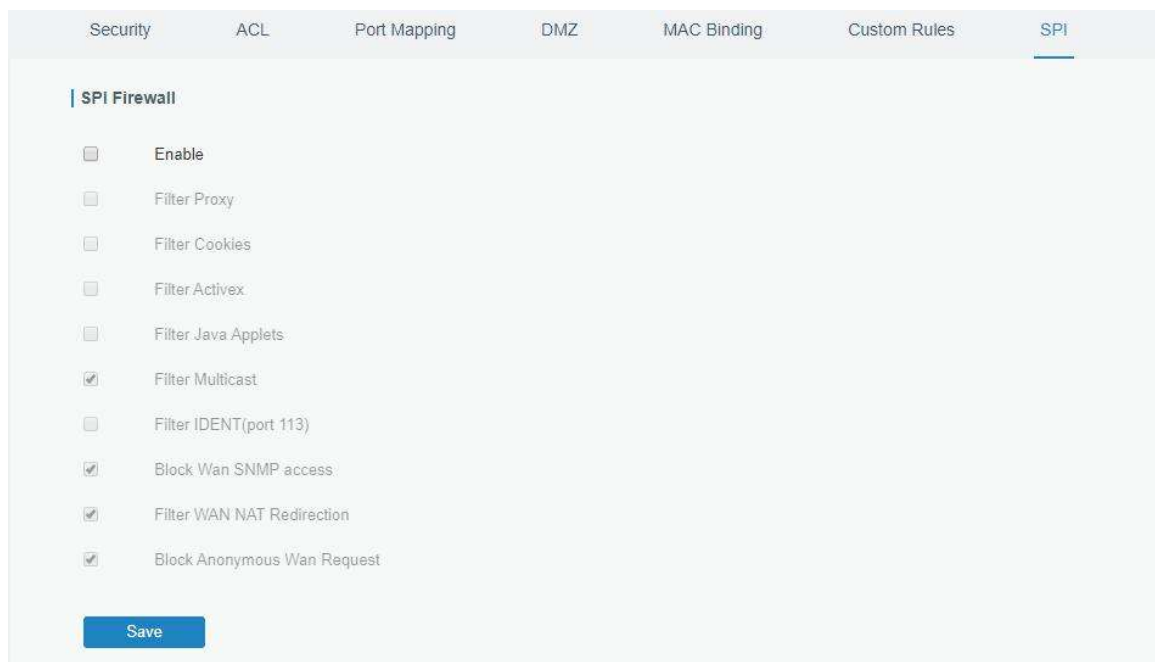

Figure 3-2-3-7

SPI Firewall	
Item	Description
Enable	Enable/disable SPI firewall.
Filter Proxy	Blocks HTTP requests containing the "Host": string.
Filter Cookies	Identifies HTTP requests that contain "Cookie": String and mangle the cookie. Attempts to stop cookies from being used.
Filter ActiveX	Blocks HTTP requests of the URL that ends in ".ocx" or ".cab".
Filter Java Applets	Blocks HTTP requests of the URL that ends in ".js" or ".class".
Filter Multicast	Prevent multicast packets from reaching the LAN.
Filter IDENT(port 113)	Prevent WAN access to Port 113.
Block WAN SNMP access	Block SNMP requests from the WAN.
Filter WAN NAT Redirection	Prevent hosts on LAN from using WAN address of router to connect servers on the LAN (which have been configured using port redirection).
Block Anonymous WAN Requests	Stop the router from responding to "pings" from the WAN.

Table 3-2-3-7 SPI Parameters

3.2.4 QoS

Quality of service (QoS) refers to traffic prioritization and resource reservation control mechanisms rather than the achieved service quality. QoS is engineered to provide different priority for different applications, users, data flows, or to guarantee a certain level of performance to a data flow.

Figure 3-2-4-1

QoS	
Item	Description
Download/Upload	
Enable	Enable or disable QoS.
Default Category	Select the default category from Service Category list.
Download/Upload Bandwidth Capacity	The download/upload bandwidth capacity of the network that the router is connected with, in kbps. Range: 1-8000000.
Service Category	
Name	You can use characters such digits, letters and "-".
Percent (%)	Set percent for the service category. Range: 0-100.
Max BW(kbps)	The maximum bandwidth that this category is allowed to consume, in kbps. The value should be less than the "Download/Upload Bandwidth Capacity" when the traffic is blocked.
Min BW(kbps)	The minimum bandwidth that can be guaranteed for the category, in kbps. The value should be less than the "MAX BW" value.
Service Category Rules	
Item	Description

Name	Give the rule a descriptive name.
Source IP	Source address of flow control (leaving it blank means any).
Source Port	Source port of flow control. Range: 0-65535 (leaving it blank means any).
Destination IP	Destination address of flow control (leaving it blank means any).
Destination Port	Destination port of flow control. Range: 0-65535 (leaving it blank means any).
Protocol	Select protocol from "ANY", "TCP", "UDP", "ICMP", and "GRE".
Service Category	Set service category for the rule.

Table 3-2-4-1 QoS (Download/Upload) Parameters

[QoS Application Example](#)

3.2.5 VPN

Virtual Private Networks, also called VPNs, are used to securely connect two private networks together so that devices can connect from one network to the other network via secure channels.

The UR32 supports DMVPN, IPsec, GRE, L2TP, PPTP, OpenVPN, as well as GRE over IPsec and L2TP over IPsec.

3.2.5.1 DMVPN

A dynamic multi-point virtual private network (DMVPN), combining mGRE and IPsec, is a secure network that exchanges data between sites without passing traffic through an organization's headquarter VPN server or router.

The screenshot displays the 'DMVPN Settings' configuration page. The left sidebar contains a navigation menu with categories like Network, System, Industrial, Maintenance, and APP. The main content area is titled 'DMVPN Settings' and includes the following fields:

- Enable:
- Hub Address:
- Local IP Address:
- GRE HUB IP Address:
- GRE Local IP Address:
- GRE Mask:
- GRE Key:
- Negotiation Mode:
- Authentication Algorithm:
- Encryption Algorithm:
- DH Group:
- Key:
- Local ID Type:
- IKE Life Time(s):
- SA Algorithm:
- PFS Group:
- Life Time(s):
- DPD Time Interval(s):
- DPD Timeout(s):
- Cisco Secret:
- NHRP Holdtime(s):

A 'Save' button is located at the bottom of the configuration area.

Figure 3-2-5-1

DMVPN	
Item	Description
Enable	Enable or disable DMVPN.
Hub Address	The IP address or domain name of DMVPN Hub.
Local IP address	DMVPN local tunnel IP address.
GRE Hub IP Address	GRE Hub tunnel IP address.
GRE Local IP Address	GRE local tunnel IP address.
GRE Netmask	GRE local tunnel netmask.
GRE Key	GRE tunnel key.
Negotiation Mode	Select from "Main" and "Aggressive".
Authentication Algorithm	Select from "DES", "3DES", "AES128", "AES192" and "AES256".
Encryption Algorithm	Select from "MD5" and "SHA1".
DH Group	Select from "MODP768_1", "MODP1024_2" and "MODP1536_5".
Key	Enter the preshared key.
Local ID Type	Select from "Default", "ID", "FQDN", and "User FQDN"
IKE Life Time (s)	Set the lifetime in IKE negotiation. Range: 60-86400.
SA Algorithm	Select from "DES_MD5", "DES_SHA1", "3DES_MD5", "3DES_SHA1", "AES128_MD5", "AES128_SHA1", "AES192_MD5", "AES192_SHA1", "AES256_MD5" and "AES256_SHA1".
PFS Group	Select from "NULL", "MODP768_1", "MODP1024_2" and "MODP1536-5".
Life Time (s)	Set the lifetime of IPsec SA. Range: 60-86400.
DPD Interval Time (s)	Set DPD interval time
DPD Timeout (s)	Set DPD timeout.
Cisco Secret	Cisco Nhrp key.
NHRP Holdtime (s)	The holdtime of NHRP protocol.

Table 3-2-5-1 DMVPN Parameters

3.2.5.2 IPsec Server

IPsec is especially useful for implementing virtual private networks and for remote user access through dial-up connection to private networks. A big advantage of IPsec is that security arrangements can be handled without requiring changes to individual user computers.

IPsec provides three choices of security service: Authentication Header (AH), Encapsulating Security Payload (ESP), and Internet Key Exchange (IKE). AH essentially allows authentication of the senders' data. ESP supports both authentication of the sender and data encryption. IKE is used for cipher code exchange. All of them can protect one and more data flows between hosts, between host and gateway, and between gateways.

The screenshot shows the configuration interface for an IPsec Server. The 'IPsec Server' tab is active. The configuration includes:

- Enable:** A checkbox that is currently unchecked.
- IPsec Mode:** A dropdown menu set to 'Tunnel'.
- IPsec Protocol:** A dropdown menu set to 'ESP'.
- Local Subnet:** An empty text input field.
- Local Subnet Mask:** An empty text input field.
- Local ID Type:** A dropdown menu set to 'Default'.
- Remote Subnet:** An empty text input field.
- Remote Subnet Mask:** An empty text input field.
- Remote ID Type:** A dropdown menu set to 'Default'.
- IKE Parameter:** An unchecked checkbox.
- SA Parameter:** An unchecked checkbox.
- IPsec Advanced:** A checked checkbox.
- Expert Options:** An empty text input field.

A blue 'Save' button is located at the bottom left of the configuration area.

Table 3-2-5-5 IPsec Parameters

3.2.5.4 GRE

Generic Routing Encapsulation (GRE) is a protocol that encapsulates packets in order to route other protocols over IP networks. It's a tunneling technology that provides a channel through which encapsulated data message could be transmitted and encapsulation and decapsulation could be realized at both ends.

In the following circumstances the GRE tunnel transmission can be applied:

- GRE tunnel could transmit multicast data packets as if it were a true network interface. Single use of IPsec cannot achieve the encryption of multicast.
- A certain protocol adopted cannot be routed.
- A network of different IP addresses shall be required to connect other two similar networks.

The screenshot displays the 'GRE Settings' configuration page. At the top, there are navigation tabs: DMVPN, IPsec Server, IPsec, GRE (selected), L2TP, PPTP, and OpenVPN Client. Below the tabs, the 'GRE Settings' section is expanded to show 'GRE_1' configuration. The settings include:

- Enable:
- Remote IP Address:
- Local IP Address:
- Local Virtual IP Address:
- Netmask:
- Peer Virtual IP Address:
- Global Traffic Forwarding:
- Remote Subnet:
- Remote Netmask:
- MTU:
- Key:
- Enable NAT:

At the bottom, there are expandable sections for 'GRE_2' and 'GRE_3', each with a plus sign icon.

Figure 3-2-5-7

GRE	
Item	Description
Enable	Check to enable GRE function.
Remote IP Address	Enter the real remote IP address of GRE tunnel.
Local IP Address	Set the local IP address.
Local Virtual IP Address	Set the local tunnel IP address of GRE tunnel.
Netmask	Set the local netmask.
Peer Virtual IP Address	Enter remote tunnel IP address of GRE tunnel.
Global Traffic Forwarding	All the data traffic will be sent out via GRE tunnel when this function is enabled.
Remote Subnet	Enter the remote subnet IP address of GRE tunnel.
Remote Netmask	Enter the remote netmask of GRE tunnel.
MTU	Enter the maximum transmission unit. Range: 64-1500.
Key	Set GRE tunnel key.
Enable NAT	Enable NAT traversal function.

Table 3-2-5-6 GRE Parameters

3.2.5.5 L2TP

Layer Two Tunneling Protocol (L2TP) is an extension of the Point-to-Point Tunneling Protocol (PPTP) used by an Internet service provider (ISP) to enable the operation of a virtual private network (VPN) over the Internet.

Figure 3-2-5-8

L2TP	
Item	Description
Enable	Check to enable L2TP function.
Remote IP Address	Enter the public IP address or domain name of L2TP server.
Username	Enter the username that L2TP server provides.
Password	Enter the password that L2TP server provides.
Authentication	Select from "Auto", "PAP", "CHAP", "MS-CHAPv1" and "MS-CHAPv2".
Global Traffic Forwarding	All of the data traffic will be sent out via L2TP tunnel after this function is enabled.
Remote Subnet	Enter the remote IP address that L2TP protects.
Remote Subnet Mask	Enter the remote netmask that L2TP protects.
Key	Enter the password of L2TP tunnel.

Table 3-2-5-7 L2TP Parameters

Figure 3-2-5-9

Advanced Settings	
Item	Description
Local IP Address	Set tunnel IP address of L2TP client. Client will obtain tunnel IP address automatically from the server when it's null.
Peer IP Address	Enter tunnel IP address of L2TP server.
Enable NAT	Enable NAT traversal function.
Enable MPPE	Enable MPPE encryption.

Address/Control Compression	For PPP initialization. User can keep the default option.
Protocol Field Compression	For PPP initialization. User can keep the default option.
Asyncmap Value	One of the PPP protocol initialization strings. User can keep the default value. Range: 0-ffffff.
MRU	Set the maximum receive unit. Range: 64-1500.
MTU	Set the maximum transmission unit. Range: 64-1500
Link Detection Interval (s)	Set the link detection interval time to ensure tunnel connection. Range: 0-600.
Max Retries	Set the maximum times of retry to detect the L2TP connection failure. Range: 0-10.
Expert Options	User can enter some other PPP initialization strings in this field and separate the strings with blank space.

Table 3-2-5-8 L2TP Parameters

3.2.5.6 PPTP

Point-to-Point Tunneling Protocol (PPTP) is a protocol that allows corporations to extend their own corporate network through private "tunnels" over the public Internet. Effectively, a corporation uses a wide-area network as a single large local area network.

Figure 3-2-5-10

PPTP	
Item	Description
Enable	Enable PPTP client. A maximum of 3 tunnels is allowed.
Remote IP Address	Enter the public IP address or domain name of PPTP server.
Username	Enter the username that PPTP server provides.
Password	Enter the password that PPTP server provides.
Authentication	Select from "Auto", "PAP", "CHAP", "MS-CHAPv1", and "MS-CHAPv2".
Global Traffic Forwarding	All of the data traffic will be sent out via PPTP tunnel once enable this function.
Remote Subnet	Set the peer subnet of PPTP.
Remote Subnet Mask	Set the netmask of peer PPTP server.

3.2.5.7 OpenVPN Client

OpenVPN is an open source virtual private network (VPN) product that offers a simplified security framework, modular network design, and cross-platform portability.

Advantages of OpenVPN include:

- Security provisions that function against both active and passive attacks.
- Compatibility with all major operating systems.
- High speed (1.4 megabytes per second typically).
- Ability to configure multiple servers to handle numerous connections simultaneously.
- All encryption and authentication features of the OpenSSL library.
- Advanced bandwidth management.
- A variety of tunneling options.
- Compatibility with smart cards that support the Windows Crypt application program interface (API).

Local Tunnel IP	Set local tunnel address.
Remote Tunnel IP	Enter remote tunnel address.
Global Traffic Forwarding	All the data traffic will be sent out via OpenVPN tunnel when this function is enabled.
Enable TLS Authentication	Check to enable TLS authentication.
Username	Enter username provided by OpenVPN server.
Password	Enter password provided by OpenVPN server.

Enable NAT	Enable NAT traversal function.
Compression	Select LZO to compress data.
Link Detection Interval (s)	Set link detection interval time to ensure tunnel connection. Range: 10-1800.
Link Detection Timeout (s)	Set link detection timeout. OpenVPN will be reestablished after timeout. Range: 60-3600.
Cipher	Select from "NONE", "BF-CBC", "DE-CBC", "DES-EDE3-CBC", "AES-128-CBC", "AES-192-CBC" and "AES-256-CBC".
MTU	Enter the maximum transmission unit. Range: 128-1500.
Max Frame Size	Set the maximum frame size. Range: 128-1500.
Verbose Level	Select from "ERROR", "WARNING", "NOTICE" and "DEBUG".
Expert Options	User can enter some other PPP initialization strings in this field and separate the strings with blank space.
Local Route	
Subnet	Set the local route's IP address.
Subnet Mask	Set the local route's netmask.

Table 3-2-5-11 OpenVPN Client Parameters

3.2.5.8 OpenVPN Server

The UR32 supports OpenVPN server to create secure point-to-point or site-to-site connections in routed or bridged configurations and remote access facilities.

The screenshot shows the 'OpenVPN Server Settings' configuration page. The settings are as follows:

- Enable:
- Protocol: UDP
- Port: 1194
- Listening IP: (empty)
- Interface: tun
- Authentication: None
- Local Virtual IP: (empty)
- Remote Virtual IP: (empty)
- Enable NAT:
- Compression: LZO
- Link Detection Interval: 60
- Cipher: None
- MTU: 1500
- Max Frame Size: 1500
- Verbose Level: ERROR
- Expert Options: (empty)

Figure 3-2-5-13

The screenshot shows a configuration interface for an OpenVPN server. It is divided into two main sections: 'Local Route' and 'Account'. The 'Local Route' section contains a table with columns for 'Subnet', 'Netmask', and 'Operation'. The 'Account' section contains a table with columns for 'Username', 'Password', and 'Operation'. Both tables have a blue '+' icon in the 'Operation' column, indicating that new entries can be added.

Figure 3-2-5-14

OpenVPN Server	
Item	Description
Enable	Enable/disable OpenVPN server.
Protocol	Select from TCP and UDP.
Port	Fill in listening port number. Range: 1-65535.
Listening IP	Enter WAN IP address or LAN IP address. Leaving it blank refers to all active WAN IP and LAN IP address.
Interface	Select from "tun" and "tap".
Authentication	Select from "None", "Pre-shared", "Username/Password", "X.509 cert" and "X. 509 cert +user".
Local Virtual IP	The local tunnel address of OpenVPN's tunnel.
Remote Virtual IP	The remote tunnel address of OpenVPN's tunnel.
Client Subnet	Local subnet IP address of OpenVPN client.
Client Netmask	Local netmask of OpenVPN client.
Renegotiation Interval(s)	Set interval for renegotiation. Range: 0-86400.
Max Clients	Maximum OpenVPN client number. Range: 1-128.
Enable CRL	Enable CRL
Enable Client to Client	Allow access between different OpenVPN clients.
Enable Dup Client	Allow multiple users to use the same certification.
Enable NAT	Check to enable the NAT traversal function.
Compression	Select "LZO" to compress data.
Link Detection Interval	Set link detection interval time to ensure tunnel connection. Range: 10-1800.
Cipher	Select from "NONE", "BF-CBC", "DES-CBC", "DES-EDE3-CBC", "AES-128-CBC", "AES-192-CBC" and "AES-256-CBC".
MTU	Enter the maximum transmission unit. Range: 64-1500.
Max Frame Size	Set the maximum frame size. Range: 64-1500.
Verbose Level	Select from "ERROR", "WARNING", "NOTICE" and "DEBUG".
Expert Options	User can enter some other PPP initialization strings in this field and separate the strings with blank space.
Local Route	
Subnet	The real local IP address of OpenVPN client.
Netmask	The real local netmask of OpenVPN client.

Account	
Username & Password	Set username and password for OpenVPN client.

3.2.7 Routing

3.2.7.1 Static Routing

A static routing is a manually configured routing entry. Information about the routing is manually entered rather than obtained from dynamic routing traffic. After setting static routing, the package for the specified destination will be forwarded to the path designated by user.

Static Routing RIP OSPF Routing Filtering

| Static Routing

Destination	Netmask/Prefix Length	Interface	Gateway	Distance	Operation
<input type="text" value="114.114.114.114"/>	<input type="text" value="255.255.255.255"/>	<input type="text" value="LAN1/WAN"/>	<input type="text" value="192.168.5.1"/>	<input type="text" value="1"/>	<input type="button" value="✕"/>

Static Routing	
Item	Description
Destination	Enter the destination IP address.
Netmask/Prefix Length	Enter the subnet mask or prefix length of destination address.
Interface	The interface through which the data can reach the destination address.
Gateway	IP address of the next router that will be passed by before the input data reaches the destination address.
Distance	Priority, smaller value refers to higher priority. Range: 1-255.

Table 3-2-7-1 Static Routing Parameters

3.2.7.2 RIP

RIP is mainly designed for small networks. RIP uses Hop Count to measure the distance to the destination address, which is called Metric. In RIP, the hop count from the router to its directly connected network is 0 and the hop count of network to be reached through a router is 1 and so on. In order to limit the convergence time, the specified metric of RIP is an integer in the range of 0 - 15 and the hop count larger than or equal to 16 is defined as infinity, which means that the destination network or host is unreachable. Because of this limitation, the RIP is not suitable for large-scale networks. To improve performance and prevent routing loops, RIP supports split horizon function. RIP also introduces routing obtained by other routing protocols.

Each router that runs RIP manages a routing database, which contains routing entries to reach all reachable destinations.

Authentication Mode	Select from "text" and "md5".
Authentication String	The authentication key for package interaction in RIPV2.
Authentication Key-chain	The authentication key-chain for package interaction in RIPV2.
Neighbor	
IP Address	Set RIP neighbor's IP address manually.
Network	
IP Address	The IP address of interface for RIP publishing.
Netmask	The netmask of interface for RIP publishing.

Table 3-2-7-3

3.2.7.3 OSPF

OSPF, short for Open Shortest Path First, is a link status based on interior gateway protocol developed by IETF.

If a router wants to run the OSPF protocol, there should be a Router ID that can be manually configured. If no Router ID configured, the system will automatically select an IP address of interface

as the Router ID. The selection order is as follows:

- If a Loopback interface address is configured, then the last configured IP address of Loopback interface will be used as the Router ID;
- If no Loopback interface address is configured, the system will choose the interface with the biggest IP address as the Router ID.

Five types of packets of OSPF:

- **Hello packet**
- **DD packet** (Database Description Packet)
- **LSR packet** (Link-State Request Packet)
- **LSU packet** (Link-State Update Packet)
- **LSAck packet** (Link-Sate Acknowledgment Packet)

Neighbor and Neighboring

After OSPF router starts up, it will send out Hello Packets through the OSPF interface. Upon receipt of Hello packet, OSPF router will check the parameters defined in the packet. If it's consistent, a neighbor relationship will be formed. Not all matched sides in neighbor relationship can form the adjacency relationship. It is determined by the network type. Only when both sides successfully exchange DD packets and LSDB synchronization is achieved, the adjacency in the true sense can be formed. LSA describes the network topology around a router, LSDB describes entire network topology.

Figure 3-2-7-4

OSPF	
Item	Description
Enable	Enable or disable OSPF.

Router ID	Router ID (IP address) of the originating LSA.
ABR Type	Select from cisco, ibm, standard and shortcut.
RFC1583 Compatibility	Enable/Disable.
OSPF Opaque-LSA	Enable/Disable LSA: a basic communication means of the OSPF routing protocol for the Internet Protocol (IP).
SPF Delay Time	Set the delay time for OSPF SPF calculations. Range: 0-6000000, in milliseconds.
SPF Initial-holdtime	Set the initialization time of OSPF SPF. Range: 0-6000000, in milliseconds.
SPF Max-holdtime	Set the maximum time of OSPF SPF. Range: 0-6000000, in milliseconds.
Reference Bandwidth	Range: 1-4294967, in Mbit.

							<input type="button" value="+"/>

Figure 3-2-7-5

Item	Description
Interface	
Interface	Select interface from "cellular0","WAN"and "Bridge0".
Hello Interval (s)	Send interval of Hello packet. If the Hello time between two adjacent routers is different, the neighbour relationship cannot be established. Range: 1-65535.
Dead Interval (s)	Dead Time. If no Hello packet is received from the neighbours within the dead time, then the neighbour is considered failed. If dead times of two adjacent routers are different, the neighbour relationship cannot be established.
Retransmit Interval (s)	When the router notifies an LSA to its neighbour, it is required to make acknowledgement. If no acknowledgement packet is received within the retransmission interval, this LSA will be retransmitted to the neighbour. Range: 3-65535.
Transmit Delay (s)	It will take time to transmit OSPF packets on the link. So a certain delay

	time should be increased before transmission the aging time of LSA. This configuration needs to be further considered on the low-speed link. Range: 1-65535.
Interface Advanced Options	
Interface	Select interface.
Network	Select OSPF network type.
Cost	Set the cost of running OSPF on an interface. Range: 1-65535.
Priority	Set the OSPF priority of interface. Range: 0-255.
Authentication	Set the authentication mode that will be used by the OSPF area. Simple: a simple authentication password should be configured and confirmed again. MD5: MD5 key & password should be configured and confirmed again.
Key ID	It only takes effect when MD5 is selected. Range 1-255.
Key	The authentication key for OSPF packet interaction.

Table 3-2-7-5 OSPF Parameters

The screenshot displays a configuration interface for OSPF parameters, organized into four main sections:

- Passive Interface:** A table with one column labeled "Passive Interface" and one column labeled "Operation" containing a plus sign (+).
- Network:** A table with four columns: "IP Address", "Netmask", "Area ID", and "Operation" (containing a plus sign (+)).
- Neighbor:** A table with four columns: "IP Address", "Priority", "Poll", and "Operation" (containing a plus sign (+)).
- Area:** A table with five columns: "Area ID", "Area", "No Summary", "Authentication", and "Operation" (containing a plus sign (+)).

Figure 3-2-7-6

Item	Description
Passive Interface	
Passive Interface	Select interface from "cellular0", "LAN1/WAN" and "Bridge0".
Network	
IP Address	The IP address of local network.
Netmask	The netmask of local network.
Area ID	The area ID of original LSA's router.
Area	
Area ID	Set the ID of the OSPF area (IP address).
Area	Select from "Stub" and "NSSA". The backbone area (area ID 0.0.0.0) cannot be set as "Stub" or "NSSA".

No Summary	Forbid route summarization.
Authentication	Select authentication from "simple" and "md5".

3.2.7.4 Routing Filtering

Figure 3-2-7-9

Routing Filtering	
Item	Description
Access Control List	
Name	User-defined name, need to start with a letter. Only letters, digits and underline (_) are allowed.
Action	Select from "permit" and "deny".
Match Any	No need to set IP address and subnet mask.
IP Address	User-defined.
Netmask	User-defined.
IP Prefix-List	
Name	User-defined name, need to start with a letter. Only letters, digits and underline (_) are allowed.
Sequence Number	A prefix name list can be matched with multiple rules. One rule is matched with one sequence number. Range: 1-4294967295.
Action	Select from "permit" and "deny".
Match Any	No need to set IP address, subnet mask, FE Length, and LE Length.
IP Address	User-defined.
Netmask	User-defined.
FE Length	Specify the minimum number of mask bits that must be matched. Range: 0-32.
LE Length	Specify the maximum number of mask bits that must be matched. Range: 0-32.

Table 3-2-7-9 Routing Filtering Parameters

3.2.8 VRRP

The Virtual Router Redundancy Protocol (VRRP) is a computer networking protocol that provides automatic assignment of available Internet Protocol (IP) routers for participating hosts. This increases the availability and reliability of routing paths via automatic default gateway selections in

an IP sub-network.

Increasing the number of exit gateway is a common method for improving system reliability. VRRP adds a group of routers that undertake gateway function into a backup group so as to form a virtual router. The election mechanism of VRRP will decide which router undertakes the forwarding task, and the host in LAN is only required to configure the default gateway for the virtual router.

In VRRP, routers need to be aware of failures in the virtual master router. To achieve this, the virtual master router sends out multicast "alive" announcements to the virtual backup routers in the same VRRP group.

The VRRP router who has the highest number will become the virtual master router. The VRRP router number ranges from 1 to 255 and usually we use 255 for the highest priority and 100 for backup.

If the current virtual master router receives an announcement from a group member (Router ID) with a higher priority, then the latter will pre-empt and become the virtual master router.

VRRP has the following characteristics:

- The virtual router with an IP address is known as the Virtual IP address. For the host in LAN, it is only required to know the IP address of virtual router, and set it as the address of the next hop of the default route.
- The network Host communicates with the external network through this virtual router.
- A router will be selected from the set of routers based on its priority to undertake the gateway function. Other routers will be used as backup routers to perform the duties of gateway for the gateway router in the case of any malfunction, so as to guarantee uninterrupted communication between the host and external network.

When interface connected with the uplink is at the state of Down or Removed, the router actively lowers its priority so that priority of other routers in the backup group will be higher. Thus the router with the highest priority becomes the gateway for the transmission task.

VRRP	
VRRP Status	
Status	DISABLE
VRRP Settings	
Enable	<input type="checkbox"/>
Interface	Bridge0
Virtual Router ID	1
Virtual IP	
Priority	100
Advertisement Interval (s)	1
Preemption Mode	<input type="checkbox"/>

IPv4 Secondary Server	114.114.114.114
Interval	300 s
Retry Interval	5 s
Timeout	3 s
Max Ping Retries	3
Save	

Figure 3-2-8-1

VRRP		
Item	Description	Default
Enable	Enable or disable VRRP.	Disable
Interface	Select the interface of Virtual Router.	None
Virtual Router ID	User-defined Virtual Router ID. Range: 1-255.	None
Virtual IP	Set the IP address of Virtual Router.	None
Priority	The VRRP priority range is 1-254 (a bigger number indicates a higher priority). The router with higher priority will be more likely to become the gateway router.	100
Advertisement Interval (s)	Heartbeat package transmission time interval between routers in the virtual ip group. Range: 1-255.	1
Preemption Mode	If the router works in the preemption mode, once it finds that its own priority is higher than that of the current gateway router, it will send VRRP notification package, resulting in re-election of gateway router and eventually replacing the original gateway router. Accordingly, the original gateway router will become a Backup router.	Disable
IPV4 Primary Server	The router will send ICMP packet to the IP address or host name to determine whether the Internet connection is still available or not.	8.8.8.8
IPV4 Secondary Server	The router will try to ping the secondary server name if primary server is not available.	114.114. 114.114
Interval	Time interval (in seconds) between two Pings.	300
Retry Interval	Set the ping retry interval. When ping failed, the router will ping again every retry interval.	5
Timeout	The maximum amount of time the router will wait for a response to a ping request. If it does not receive a response for the amount of time defined in this field, the ping request will be considered as failure.	3
Max Ping Retries	The retry times of the router sending ping request until determining that the connection has failed.	3

3.2.9 DDNS

Dynamic DNS (DDNS) is a method that automatically updates a name server in the Domain Name System, which allows user to alias a dynamic IP address to a static domain name.

DDNS serves as a client tool and needs to coordinate with DDNS server. Before starting configuration, user shall register on a website of proper domain name provider and apply for a domain name.

3.3.1.2 System Time

This section explains how to set the system time including time zone and time synchronization type.

Note: to ensure that the router runs with the correct time, it's recommended that you set the system time when configuring the router.

Figure 3-3-1-2

Figure 3-3-1-3

Figure 3-3-1-4

Figure 3-3-1-5

System Time	
Item	Description
Current Time	Show the current system time.
Time Zone	Click the drop down list to select the time zone you are in.
Sync Type	Click the drop down list to select the time synchronization type.
Sync with Browser	Synchronize time with browser.
Browser Time	Show the current time of browser.
Set up Manually	Manually configure the system time.
GPS Time Synchronization	Synchronize time with GPS.
Primary NTP Server	Enter primary NTP Server's IP address or domain name.
Secondary NTP Server	Enter secondary NTP Server's IP address or domain name.
NTP Server	

Enable NTP Server	NTP client on the network can achieve time synchronization with router after "Enable NTP Server" option is checked.
-------------------	---------------------------------------------------------------------------------------------------------------------

3.3.1.3 Email

SMTP, short for Simple Mail Transfer Protocol, is a TCP/IP protocol used in sending and receiving e-mail. This section describes how to configure email settings and add email groups for alarms and events.

Figure 3-3-1-6

SMTP Client Settings	
Item	Description
Enable	Enable or disable SMTP client function.
Email Address	Enter the sender's email account.
Password	Enter the sender's email password.
SMTP Server Address	Enter SMTP server's domain name.
Port	Enter SMTP server port. Range: 1-65535.
Encryption	Select from: None, TLS/SSL, STARTTLS. None: No encryption. The default port is 25. STARTTLS: STARTTLS is a way to take an existing insecure connection and upgrade it to a secure connection by using SSL/TLS. The default port is 587. TLS/SSL: SSL and TLS both provide a way to encrypt a communication channel between two computers (e.g. your computer and our server). TLS is the successor to SSL and the terms SSL and TLS are used interchangeably unless you're referring to a specific version of the protocol. The default port is 465.

Table 3-3-1-3 SMTP Setting

SMS	
Item	Description
Send SMS	
Phone Number	Enter the number to receive the SMS.
Content	SMS content.
Inbox/Outbox	
Sender	SMS sender from outside.
Recipient	SMS recipient which UR32 send to.
From	Select the start date.
To	Select the end date.
Search	Search for SMS record.
Clear All	Clear all SMS records in web GUI.

Table 3-3-2-3 SMS Settings

3.3.3 User Management

3.3.3.1 Account

Here you can change the login username and password of the administrator.

Note: it is strongly recommended that you modify them for the sake of security.

Figure 3-3-3-1

Account	
Item	Description
Username	Enter a new username. You can use characters such as a-z, 0-9, "_", "-", "\$". The first character can't be a digit.
Old Password	Enter the old password.
New Password	Enter a new password.
Confirm New Password	Enter the new password again.

Table 3-3-3-1 Account Settings

3.3.3.2 User Management

This section describes how to create common user accounts.

The common user permission includes Read-Only and Read-Write.

Figure 3-3-3-2

User Management	
Item	Description
Username	Enter a new username. You can use characters such as a-z, 0-9, "_", "-", "\$". The first character can't be a digit.
Password	Set password.
Permission	Select user permission from "Read-Only" and "Read-Write". <ul style="list-style-type: none"> - Read-Only: users can only view the configuration of router in this level. - Read-Write: users can view and set the configuration of router in this level.

Table 3-3-3-2 User Management

3.3.4 SNMP

SNMP is widely used in network management for network monitoring. SNMP exposes management data with variables form in managed system. The system is organized in a management information base (MIB) which describes the system status and configuration. These variables can be remotely queried by managing applications.

Configuring SNMP in networking, NMS, and a management program of SNMP should be set up at the Manager.

Configuration steps are listed as below for achieving query from NMS:

1. Enable SNMP setting.
2. Download MIB file and load it into NMS.
3. Configure MIB View.
4. Configure VCAM.

Related Configuration Example

[SNMP Application Example](#)

3.3.4.1 SNMP

UR32 supports SNMPv1, SNMPv2c and SNMPv3 version. SNMPv1 and SNMPv2c employ community name authentication. SNMPv3 employs authentication encryption by username and password.

Figure 3-3-4-1

SNMP Settings	
Item	Description
Enable	Enable or disable SNMP function.
Port	Set SNMP listened port. Range: 1-65535. The default port is 161.
SNMP Version	Select SNMP version; support SNMP v1/v2c/v3.
Location Information	Fill in the location information.

Contact Information	Fill in the contact information.
---------------------	----------------------------------

Table 3-3-4-1 SNMP Parameters

3.3.4.2 MIB View

This section explains how to configure MIB view for the objects.

Figure 3-3-4-2

MIB View	
Item	Description
View Name	Set MIB view's name.
View Filter	Select from "Included" and "Excluded".
View OID	Enter the OID number.
Included	You can query all nodes within the specified MIB node.
Excluded	You can query all nodes except for the specified MIB node.

Table 3-3-4-2 MIB View Parameters

3.3.4.3 VACM

This section describes how to configure VACM parameters.

Figure 3-3-4-3

VACM	
Item	Description
SNMP v1 & v2 User List	
Community	Set the community name.
Permission	Select from "Read-Only" and "Read-Write".

MIB View	Select an MIB view to set permissions from the MIB view list.
Network	The IP address and bits of the external network accessing the MIB view.
Read-Write	The permission of the specified MIB node is read and write.
Read-Only	The permission of the specified MIB node is read only.
SNMP v3 User Group	
Group Name	Set the name of SNMPv3 group.
Security Level	Select from "NoAuth/NoPriv", "Auth/NoPriv", and "Auth/Priv".
Read-Only View	Select an MIB view to set permission as "Read-only" from the MIB view list.
Read-Write View	Select an MIB view to set permission as "Read-write" from the MIB view list.
Inform View	Select an MIB view to set permission as "Inform" from the MIB view list.
SNMP v3 User List	
Username	Set the name of SNMPv3 user.
Group Name	Select a user group to be configured from the user group.
Authentication	Select from "MD5", "SHA", and "None".
Authentication Password	The password should be filled in if authentication is "MD5" and "SHA".
Encryption	Select from "AES", "DES", and "None".
Encryption Password	The password should be filled in if encryption is "AES" and "DES".

Table 3-3-4-3 VACM Parameters

3.3.4.4 Trap

This section explains how to enable network monitoring by SNMP trap.

Figure 3-3-3-4

SNMP Trap	
Item	Description
Enable	Enable or disable SNMP Trap function.
SNMP Version	Select SNMP version; support SNMP v1/v2c/v3.
Server Address	Fill in NMS's IP address or domain name.
Port	Fill in UDP port. Port range is 1-65535. The default port is 162.
Name	Fill in the group name when using SNMP v1/v2c; fill in the username when using SNMP v3.

Auth/Priv Mode	Select from "NoAuth & No Priv", "Auth & NoPriv", and "Auth & Priv".
----------------	---------------------------------------------------------------------

Table 3-3-4-4 Trap Parameters

3.3.4.5 MIB

This section describes how to download MIB files. The last MIB file "LTE-ROUTER-MIB.txt" is for the UR32 router.

Figure 3-3-4-5

MIB	
Item	Description
MIB File	Select the MIB file you need.
Download	Click "Download" button to download the MIB file to PC.

Table 3-3-4-5 MIB Download

3.3.5 AAA

AAA access control is used for visitors control and the available corresponding services once access is allowed. It adopts the same method to configure three independent safety functions. It provides modularization methods for following services:

- Authentication: verify if the user is qualified to access to the network.
- Authorization: authorize related services available for the user.
- Charging: record the utilization of network resources.

3.3.5.1 Radius

Using UDP for its transport, Radius is generally applied in various network environments with higher requirements of security and permission of remote user access.

Figure 3-3-5-1

Radius	
Item	Description
Enable	Enable or disable Radius.
Server IP Address	Fill in the Radius server IP address/domain name.
Server Port	Fill in the Radius server port. Range: 1-65535.
Key	Fill in the key consistent with that of Radius server in order to get connected with Radius server.

Table 3-3-5-1 Radius Parameters

3.3.5.2 TACACS+

Using TCP for its transport, TACACS+ is mainly used for authentication, authorization and charging of the access users and terminal users by adopting PPP and VPDN.

Figure 3-3-5-2

TACACS+	
Item	Description
Enable	Enable or disable TACACS+.
Server IP Address	Fill in the TACACS+ server IP address/domain name.
Server Port	Fill in the TACACS+ server port. Range: 1-65535.
Key	Fill in the key consistent with that of TACACS+ server in order to get connected with TACACS+ server.

Table 3-3-5-2 TACACS+ Parameters

3.3.5.3 LDAP

A common usage of LDAP is to provide a central place to store usernames and passwords. This allows many different applications and services to connect the LDAP server to validate users.

LDAP is based on a simpler subset of the standards contained within the X.500 standard. Because of this relationship, LDAP is sometimes called X.500-lite as well.

The screenshot shows a web interface for configuring LDAP settings. At the top, there are four tabs: Radius, Tacacs+, LDAP (which is selected and underlined), and Authentication. Below the tabs, the 'LDAP Settings' section is visible. It contains the following fields:

- Enable:** A checkbox that is checked.
- Server IP Address:** An empty text input field.
- Server Port:** A text input field containing the value '389'.
- Base DN:** An empty text input field.
- Security:** A dropdown menu currently set to 'None'.
- Username:** An empty text input field.
- Password:** An empty text input field.

At the bottom left of the settings area, there is a blue button labeled 'Save'.

Figure 3-3-5-3

LDAP	
Item	Description
Enable	Enable or Disable LDAP.
Server IP Address	Fill in the LDAP server's IP address/domain name. The maximum count is 10.
Server Port	Fill in the LDAP server's port. Range: 1-65535
Base DN	The top of LDAP directory tree.
Security	Select secure method from "None", "StartTLS" and "SSL".

Username	Enter the username to access the server.
Password	Enter the password to access the server.

Table 3-3-5-3 LDAP Parameters

3.3.5.4 Authentication

AAA supports the following authentication ways:

- None: uses no authentication, generally not recommended.
- Local: uses the local username database for authentication.
 - Advantages: rapidness, cost reduction.
 - Disadvantages: storage capacity limited by hardware.
- Remote: has user's information stored on authentication server. Radius, TACACS+ and LDAP supported for remote authentication.

When radius, TACACS+, and local are configured at the same time, the priority level is: 1 > 2 > 3.

Service	1	2	3

3.4 Industrial Interface

UR32 router is capable of connecting with terminals through industrial interfaces so as to realize wireless communication between terminals and remote data center.

There are two types of the router's industrial interface: serial port (RS232 and RS485) and I/O (digital input and digital output).

RS232 adopts full-duplex communication. It's generally used for communication within 20m.

RS485 adopts half-duplex communication to achieve transmission of serial communication data with distance up to 120m.

Digital input of I/O interface is a logical variable or switch variable with only two values of 0 and 1. "0" refers to low level and "1" refers to high level .

3.4.1 I/O

3.4.1.1 DI

This section explains how to configure monitoring condition on digital input, and take certain actions once the condition is reached.

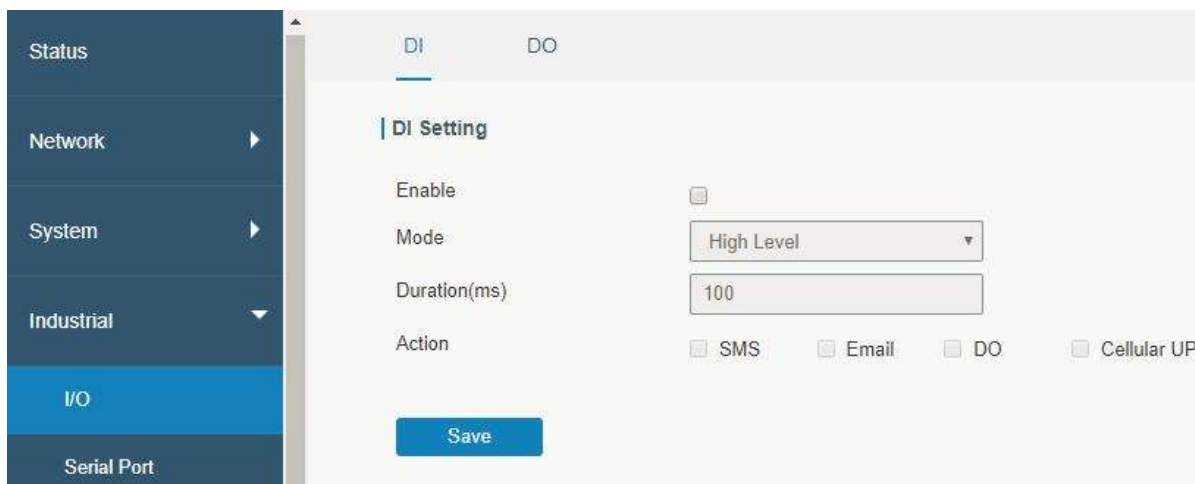

Figure 3-4-1-1

DI	
Item	Description
Enable	Enable or disable DI.
Mode	Options are "High Level", "Low Level", and "Counter".
Duration (ms)	Set the duration of high/low level in digital input. Range: 1-10000.
Condition	Select from "Low->High", and "High-> Low".
Low->High	The counter value will increase by 1 if digital input's status changes from low level to high level.
High->Low	The counter value will increase by 1 if digital input's status changes from high level to low level.
Counter	The system will take actions accordingly when the counter value reach the preset one, and then reset the counter value to 0. Range: 1-100.
Action	Select the corresponding actions that the system will take when digital input mode meets the preset condition or duration.
SMS	Check to enable SMS alarm.
Phone Group	Set phone group to receive SMS alarm.
SMS Content	Set the content of SMS alarm.
Email	Check to enable Email alarm.
Email Group	Set phone group to receive email alarm.
Email Content	Set the content of email alarm.
DO	Control output status of DO.
Cellular UP	Trigger the router to switch from offline mode to cellular network mode.

Item	Description	Default
Transparent		
Protocol	Select "TCP" or "UDP" protocol.	TCP
Keepalive Interval (s)	After TCP client is connected with TCP server, the client will send heartbeat packet by TCP regularly to keep alive. The interval range is 1-3600, in seconds.	75
Keepalive Retry Times	When TCP heartbeat times out, the router will resend heartbeat. After it reaches the preset retry times, router will reconnect to TCP server. The range is 1-16.	9
Packet Size	Set the size of the serial data frame. Packet will be sent out when preset frame size is reached. The range is 1-1024. The unit is byte.	1024
Serial Frame Interval	<p>The interval that the router sends out real serial data stored in the buffer area to public network. The range is 10-65535, in milliseconds.</p> <p>Note: data will be sent out to public network when real serial data size reaches the preset packet size, even though it's within the serial frame interval.</p>	100
Reconnect Interval	After connection failure, router will reconnect to the server at the preset interval, in seconds. The range is 10-60.	10
Specific Protocol	By Specific Protocol, the router will be able to connect to the TCP2COM software.	--
Heartbeat Interval	By Specific Protocol, the router will send heartbeat packet to the server regularly to keep alive. The interval range is 1-3600, in seconds.	30
ID	Define unique ID of each router. No longer than 63 characters without space character.	--
Register String	Define register string for connection with the server.	Null
Server Address	Fill in the TCP or UDP server address (IP/domain name).	Null
Server Port	Fill in the TCP or UDP server port. Range: 1-65535.	Null
Status	Show the connection status between the router and the server.	--
Modbus		
Local Port	Set the router listening port. Range: 1-65535.	502
Maximum TCP Clients	Specify the maximum number of TCP clients allowed to connect the router which act as a TCP server.	32
Connection Timeout	If the TCP server does not receive any data from the slave device within the connection timeout period, the TCP connection will be broken.	60
Reading Interval	Set the interval for reading remote channels. When a read cycle end	100

	s, the new read cycle begins until this interval expires. If it is set to 0, the device will restart the new read cycle after all channels have been read.	
Response Timeout	Set the maximum response time that the router waits for the response to the command. If the device does not get a response after the maximum response time, it's determined that the command has timed out.	3000
Maximum Retries	Set the maximum retry times after it fails to read.	3

3.4.3 Modbus Slave

This section describes how to achieve I/O status via Modbus TCP, Modbus RTU and Modbus RTU over TCP.

3.4.3.1 Modbus TCP

You can define the address of the DI and DO ports so as to poll DI's status and control DO's status via Modbus TCP protocol.

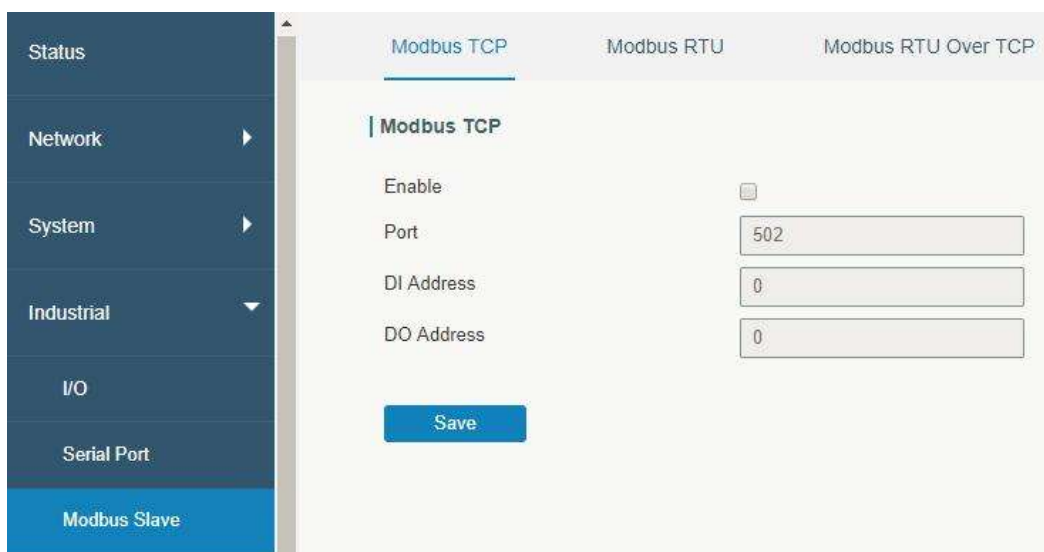

Figure 3-4-3-1

Modbus TCP		
Item	Description	Default
Enable	Enable/disable Modbus TCP.	Disable
Port	Set the router listening port. Range: 1-65535.	502
DI Address	Define the address of DI, range: 0-255.	0
DO Address	Define the address of DO, range: 0, 2-255.	0

Table 3-4-3-1 Modbus TCP Parameters

3.4.3.2 Modbus RTU

You can define the address of the DI and DO ports so as to poll DI's status and control DO's status via Modbus RTU protocol.

Figure 3-4-3-2

Modbus RTU		
Item	Description	Default
Enable	Enable/disable Modbus RTU.	Disable
Serial Port	Select the corresponding serial port.	serial
Slave ID	Set slave ID is used for distinguishing different devices on the same link.	1
DI Address	Define the address of DI, range: 0-255.	0
DO Address	Define the address of DO, range: 0, 2-255.	0

Table 3-4-3-2 Modbus RTU Parameters

3.4.3.3 Modbus RTU Over TCP

You can define the address of the DI and DO ports so as to poll DI's status and control DO's status via Modbus RTU over TCP.

Figure 3-4-3-3

Modbus RTU Over TCP		
Item	Description	Default
Enable	Enable/disable Modbus RTU over TCP function.	Disable
Slave ID	Set slave ID is used for distinguishing different devices on the same link.	1
Device ID	Set device ID. The server will get the device ID to the server for identifying identity so that the server can manage multiple devices.	--
Reconnection Interval	The reconnection interval when the device and the server fails to establish connection or disconnected.	10
DI Address	Define the address of DI, range: 0-255.	0
DO Address	Define the address of DO, range: 0, 2-255.	0
Server List		
IP	Enter the IP address of the server.	
Port	Enter the port of the server.Range: 0-65535.	
Status	Show the connection status between the router and the server.	

Table 3-4-3-3 Modbus RTU Over TCP Parameters

3.4.4 Modbus Master

UR32 router can be set as Modbus Master to poll the remote Modbus Slave and send alarm according to the response.

3.4.4.1 Modbus Master

You can configure Modbus Master's parameters on this page.

Figure 3-4-4-1

Modbus Master		
Item	Description	Default
Enable	Enable/disable Modbus master.	--
Read Interval/s	Set the interval for reading remote channels. When the read cycle ends, the commands which haven't been sent out will be discard, and the new read cycle begins. If it is set to 0, the device will restart the new read cycle after all channels have been read. Range: 0-600.	0
Max. Retries	Set the maximum retry times after it fails to read, range: 0-5.	3
Max. Response Time/ms	Set the maximum response time that the router waits for the response to the command. If the device does not get a response after the maximum response time, it's determined that the command has timed out. Range: 10-1000.	500
Execution Interval/ms	The execution interval between each command. Range: 10-1000.	50
Channel Name	Select a readable channel form the channel list.	--

Table 3-4-4-1

3.4.4.2 Channel

You can add the channels and configure alarm setting on this page, so as to connect the router to the remote Modbus Slave to poll the address on this page and receive alarms from the router in different conditions.

Name	Slave ID	Address	Number	Type	Link	IP Address	Port	Sign	Decima l Place	Operation
	1	0	1	Holding R	TCP				0	x
+										

Figure 3-4-4-2

Channel Setting	
Item	Description
Name	Set the name to identify the remote channel. It cannot be blank.
Slave ID	Set Modbus slave ID.
Address	The starting address for reading.
Number	The address number for reading.
Type	Read command, options are "Coil", "Discrete", "Holding Register (INT16)", "Input Register (INT16)", "Holding Register (INT32)" and "Holding Register (Float)".

Link	Select TCP for transportation.
IP address	Fill in the IP address of the remote Modbus device.
Port	Fill in the port of the remote Modbus device.
Sign	To identify whether this channel is signed. Default: Unsigned.
Decimal Place	Used to indicate a dot in the read into the position of the channel. For example: read the channel value is 1234, and a Decimal Place is equal to 2, then the actual value is 12.34.

Table 3-4-4-2

The screenshot shows the 'Alarm Setting' configuration page. The 'Name' field is set to 'tunnel1'. The 'Condition' is set to 'GE(>)'. The 'Max. Threshold' is set to '0'. The 'Alarm' section has both 'SMS' and 'Email' checked. There are empty dropdown menus for 'Phone Group' and 'Email Group'. The 'Normal Content' and 'Abnormal Content' fields contain a template: 'Note: \$YEAR/\$MON/\$DAY \$TIME, get NORMAL data \$VALUE from address \$ADDRESS of channel \$NAME. (Abnormal scope is'. The 'Continuous Alarm' checkbox is unchecked. 'Save' and 'Cancel' buttons are at the bottom.

Figure 3-4-4-3

Alarm Setting	
Item	Description
Name	Set the same name with the channel name to identify the remote channel.
Condition	The condition that triggers alert.
Min. Threshold	Set the min. value to trigger the alert. When the actual value is less than this value, the alarm will be triggered.
Max. Threshold	Set the max. value to trigger the alert. When the actual value is more than this value, the alarm will be triggered.
Alarm	Select the alarm method, e.g SMS.
SMS	The preset alarm content will be sent to the specified phone number.
Phone Group	Select the phone group to receive the alarm SMS.
Email Group	Select the Email group to receive the alarm Email.
Normal Content	When the actual value is restored to the normal value from exceeding the threshold value, the router will automatically cancel the abnormal

	alarm and send the preset normal content to the specified phone group.
Abnormal Content	When the actual value exceeds the preset threshold, the router will automatically trigger the alarm and send the preset abnormal content to the specified phone group.
Continuous Alarm	Once it is enabled, the same alarm will be continuously reported. Otherwise, the same alarm will be reported only one time.

Table 3-4-4-3

Name	IP	Port	Operation
All			X
			+

Figure 3-4-4-4

TCP Forwarding	
Item	Description
Name	The name of Modbus Master's channel.
IP	The IP address of the server which the packets are forwarded to.
Port	The port of the server's which the packets are forwarded to.

Table 3-4-4-4

3.4.5 GPS (Only Applicable to GPS Version)

This section give you a detailed introduction to GPS settings, including GPS IP forwarding and GPS serial forwarding.

3.4.5.1 GPS

When you want to receive GPS data, you should enable GPS function on this page.

Figure 3-4-5-1

3.4.5.2 GPS IP Forwarding

GPS IP forwarding means that GPS data can be forwarded over the Internet.

Figure 3-4-5-2

Server Address	Server Port	Status	Operation

Figure 3-4-5-3

GPS IP Forwarding		
Item	Description	Default
Enable	Forward the GPS data to the client or server.	Disable
Type	Select connection type of the router. The options are "Client" and "Server".	Client
Protocol	Select protocol of data transmission. The options are "TCP" and "UDP".	TCP
Keepalive Interval	After it's connected with server/client, the router will send heartbeat packet regularly to the server/client to keep alive. The interval range is 1-3600, in seconds.	75
Keepalive Retry	When TCP heartbeat times out, the router will resend heartbeat. After it reaches the preset retry times, router will reconnect to TCP server. The range is 1-16.	9
Local Port	Set the router listening port. Range: 1-65535.	
Reconnect Interval	After connection failure, router will reconnect to the server at the preset interval, in seconds. The range is 10-60.	10

Report Interval	Router will send GPS data to the server/client at the preset interval, in seconds. The range is 1-60.	30
Include RMC	Whether include RMC in GPS data.	--
Include GSA	Whether include GSA in GPS data.	--
Include GGA	Whether include GGA in GPS data.	--
Include GSV	Whether include GSV in GPS data.	--
Message Prefix	Add a prefix to the GPS data.	Null
Message Suffix	Add a suffix to the GPS data.	Null
Destination IP Address		
Server Address	Fill in the server address to receive GPS data (IP/domain name).	--
Server Port	Fill in the port to receive GPS data. Range: 1-65535.	--
Status	Show the connection status between the router and the server.	--

Table 3-4-5-1 GPS IP Forwarding Parameters

3.4.5.3 GPS Serial Forwarding

GPS IP forwarding means that GPS data can be forwarded to the serial port.

Figure 3-4-5-4

GPS Serial Forwarding		
Item	Description	Default
Enable	Forward the GPS data to the preset serial port.	Disable
Serial Type	Select the serial port to receive GPS data.	Serial

Report Interval	Router will forward the GPS data to the serial port at the preset interval, in seconds. The range is 1-60.	30
Include RMC	Whether include RMC in GPS data.	--
Include GSA	Whether include GSA in GPS data.	--
Include GGA	Whether include GGA in GPS data.	--
Include GSV	Whether include GSV in GPS data.	--

Table 3-4-5-2 GPS Serial Forwarding Parameters

3.5 Maintenance

This section describes system maintenance tools and management.

3.5.1 Tools

Troubleshooting tools includes ping, traceroute, packet analyzer and qxdmlog.

3.5.1.1 Ping

Ping tool is engineered to ping outer network.

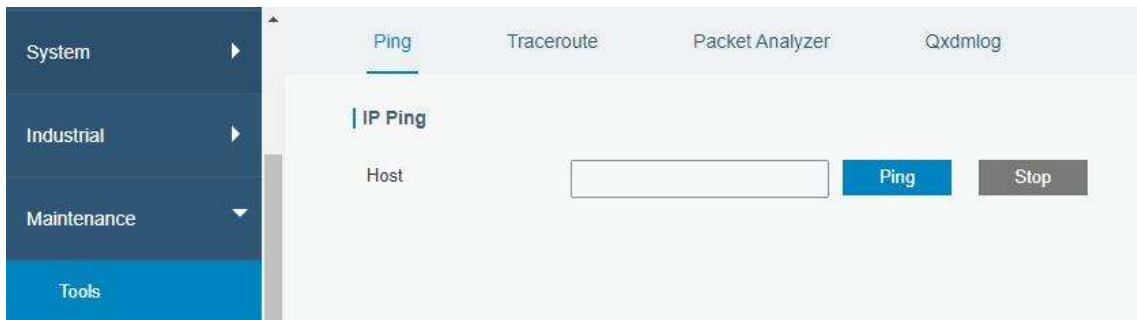

Figure 3-5-1-1

PING	
Item	Description
Host	Ping outer network from the router.

Table 3-5-1-1 IP Ping Parameters

3.5.1.2 Traceroute

Traceroute tool is used for troubleshooting network routing failures.

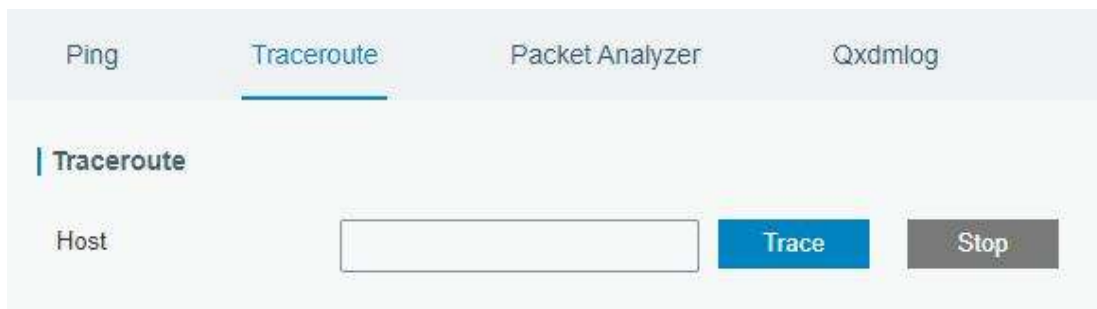

Figure 3-5-1-2

Traceroute	
Item	Description
Host	Address of the destination host to be detected.

Table 3-5-1-2 Traceroute Parameters

3.5.1.3 Packet Analyzer

Packet Analyzer is used for capturing the packet of different interfaces.

Figure 3-5-1-3

Packet Analyzer	
Item	Description
Ethernet Interface	Select the interface to capture packages.
IP Address	Set the IP address that the router will capture.
Port	Set the port that the router will capture.
Advanced	Set the rules for sniffer. The format is tcpdump.

Table 3-5-1-3 Packet Analyzer Parameters

3.5.1.4 Qxdmlog

This section allow collecting diagnostic logs via QXDM tool.

Figure 3-5-1-4

3.5.2 Debugger

3.5.2.1 Cellular Debugger

This section explains how to send AT commands to router and check cellular debug information.

Figure 3-5-2-1

Cellular Debugger	
Item	Description
Command	Enter the AT command that you want to send to cellular modem.
View Recent Logs (lines)	View the specified lines of the result.
Result	Show the response result from cellular modem.

Table 3-5-2-1 Cellular Debugger Parameters

3.5.2.2 Firewall Debugger

This section explains how to send commands to router and check firewall information.

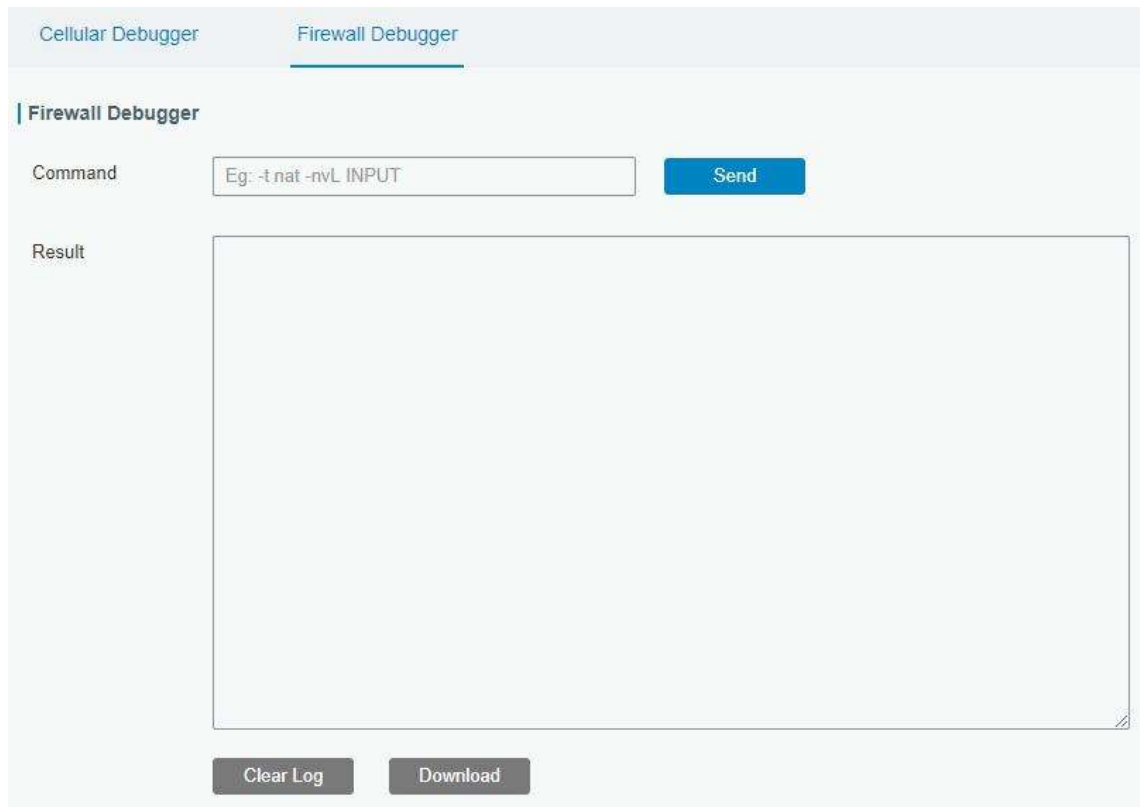

Figure 3-5-2-2

Firewall Debugger	
Item	Description
Command	Enter the AT command that you want to send to firewall module.
Result	Show the response result from firewall module.

Table 3-5-2-2 Firewall Debugger Parameters

3.5.3 Log

The system log contains a record of informational, error and warning events that indicates how the system processes. By reviewing the data contained in the log, an administrator or user troubleshooting the system can identify the cause of a problem or whether the system processes are loading successfully. Remote log server is feasible, and router will upload all system logs to remote log server such as Syslog Watcher.

3.5.3.1 System Log

This section describes how to view the recent log on web.

Figure 3-5-3-1

System Log	
Item	Description
View recent (lines)	View the specified lines of system log.
Clear Log	Clear the current system log.

Table 3-5-3-1 System Log Parameter

3.5.3.2 Log Download

This section describes how to download log files.

File Name	File Size/KB	Creation Time	Operation
vpn.log	1	2020/04/30 14:37:55	
system.log	872	2020/05/08 19:35:03	
httpd.log	645	2020/05/08 19:34:12	
firewall.log	0	2020/04/30 14:37:09	
cellular.log	1619	2020/05/08 19:35:01	

Figure 3-5-3-2

Log Download	
Item	Description
Download All	Download all log files.

File Name	Show the name of log files.
File Size/KB	Show the size of log files.
Creation Time	Show the creation time of log files.
Operation	Click to download every log file.

Table 3-5-3-2 System Log Parameter

3.5.3.3 Log Settings

This section explains how to enable remote log server and local log setting.

Figure 3-5-3-3

Log Settings	
Item	Description
Remote Log Server	
Enable	With "Remote Log Server" enabled, router will send all system logs to the remote server.
Syslog Server Address	Fill in the remote system log server address (IP/domain name).
Port	Fill in the remote system log server port.
Local Log File	
Storage	User can store the log file in memory or TF card.
Size	Set the size of the log file to be stored.
Log Severity	The list of severities follows the syslog protocol.

Table 3-5-3-3 Log Settings Parameters

3.5.4 Upgrade

This section describes how to upgrade the router firmware via web. Generally you don't need to do the firmware upgrade.

Note: any operation on web page is not allowed during firmware upgrade, otherwise the upgrade will be interrupted, or even the device will break down.

Figure 3-5-4-1

Upgrade	
Item	Description
Firmware Version	Show the current firmware version.
Reset Configuration to Factory Default	When this option is checked, the router will be reset to factory defaults after upgrade.
Upgrade Firmware	Click "Browse" button to select the new firmware file, and click "Upgrade" to upgrade firmware.

Table 3-5-4-1 Upgrade Parameters

Related Configuration Example

[Firmware Upgrade](#)

3.5.5 Backup and Restore

This section explains how to create a complete backup of the system configurations to a file, restore the config file to the router and reset to factory defaults.

Figure 3-5-5-1

Backup and Restore	
Item	Description
Config File	Click "Browse" button to select configuration file, and then click "Import" button to upload the configuration file to the router.
Backup	Click "Backup" to export the current configuration file to the PC.
Reset	Click "Reset" button to reset factory default settings. Router will restart after reset process is done.

Table 3-5-5-1 Backup and Restore Parameters

Related Configuration Example

[Restore Factory Defaults](#)

3.5.6 Reboot

On this page you can reboot the router immediately or regularly. We strongly recommend clicking "Save" and "Apply" button before rebooting the router so as to avoid losing the new configuration.

Figure 3-5-6-1

Reboot	
Item	Description
Reboot Now	Reboot the router immediately.
Schedule	
Enable	Reboot the router at a scheduled frequency.
Cycles	Select the date and time to execute the schedule.

Table 3-5-2-1 Schedule Parameters

3.6 APP

3.6.1 Python

Python is an object-oriented programming language that has gained popularity because of its clear syntax and readability.

As an interpreted language, Python has a design philosophy that emphasizes code readability, notably using whitespace indentation to delimit code blocks rather than curly brackets or keywords, and a syntax that allows programmers to express concepts in fewer lines of code than it's used in other languages such as C++ or Java. The language provides constructs and intends to enable writing clear programs on both small and large scale.

Users can use Python to quickly generate the prototype of the program, which can be the final interface of the program, rewrite it with a more appropriate language, and then encapsulate the extended class library that Python can call.

This section describes how to view the relevant running status such as App-manager, SDK version, extended storage, etc. Also you can change the App-manager configuration, and import the Python App package from here.

3.6.1.1 Python

Micro SD card must be installed for Python App.

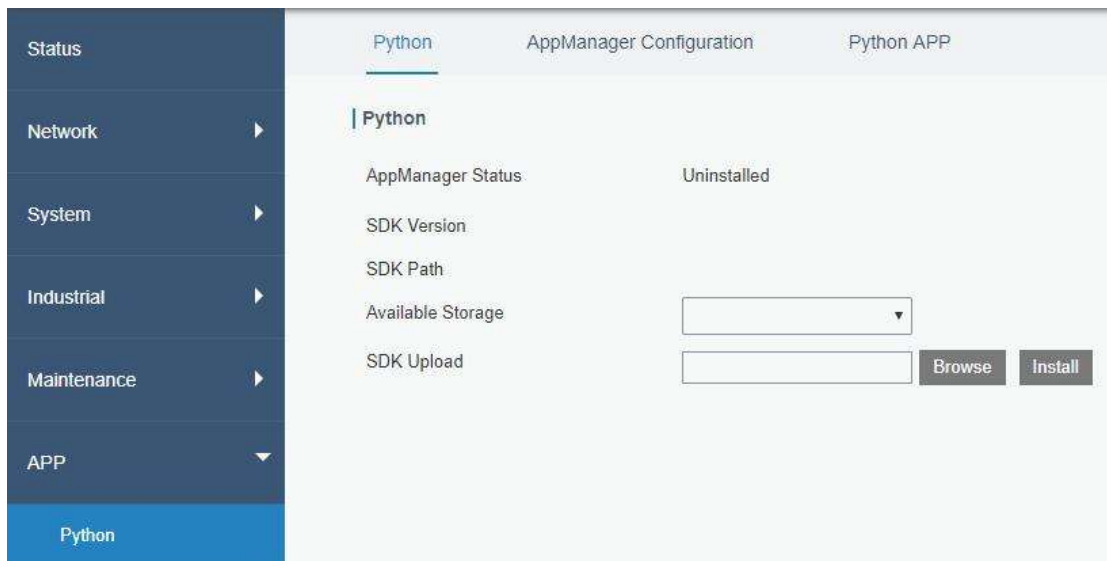

Figure 3-6-1-1

Python	
Item	Description
AppManager Status	Show AppManager's running status, like "Uninstalled", "Running" or "Stopped".
SDK Version	Show the version of the installed SDK.
SDK Path	Show the SDK installation path.
Available Storage	Select available storage such as Micro SD to install SDK.
SDK Upload	Upload and install SDK for Python.
Uninstall	Uninstall SDK.

View	View application status managed by AppManager.
------	------------------------------------------------

Table 3-6-1-1 Python Parameters

3.6.1.2 App Manager Configuration

Figure 3-6-1-2

AppManager Configuration	
Item	Description
Enable	After enabling Python AppManager, user can click "View" button on the "Python" webpage to view the application status managed by AppManager.
App Management	
ID	Show the ID of the imported App.
App Command	Show the name of the imported App.
Logfile Size(MB)	User-defined Logfile size. Range: 1-50.
Uninstall	Uninstall APP.
App Status	
App Name	Show the name of the imported App.
App Version	Show the version of the imported App.
SDK Version	Show the SDK version which the imported App is based on.

Table 3-6-1-2 APP Manager Parameters

3.6.1.3 Python App

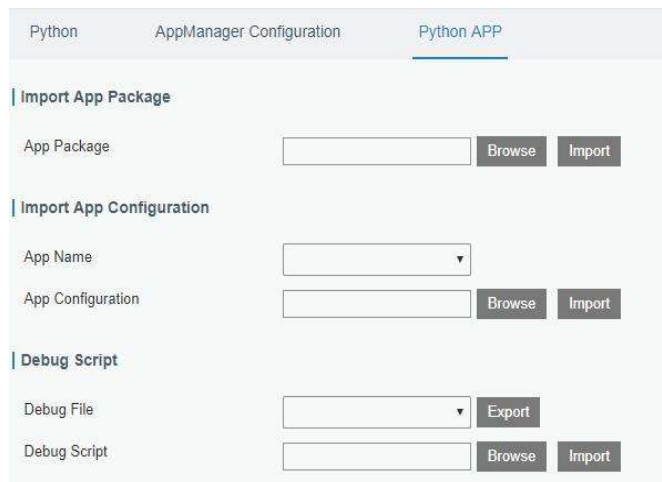

Figure 3-6-1-3

Python APP	
Item	Description
App Package	Select App package and import.
App Name	Select App to import configuration.
App Configuration	Select configuration file and import.
Debug File	Export script file.
Debug Script	Select Python script to be debugged and import.

Table 3-6-1-3 APP Parameters

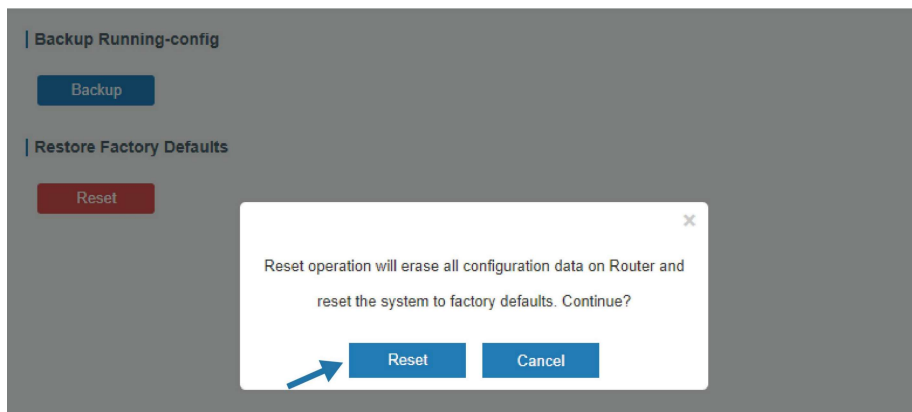

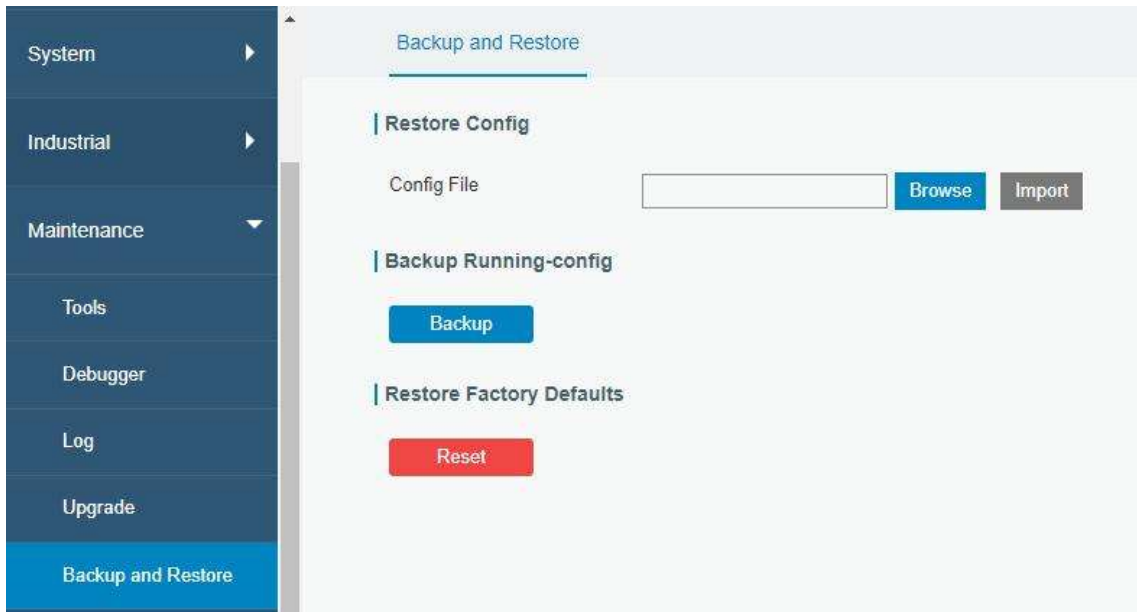

Chapter 4 Application Examples

4.1 Restore Factory Defaults

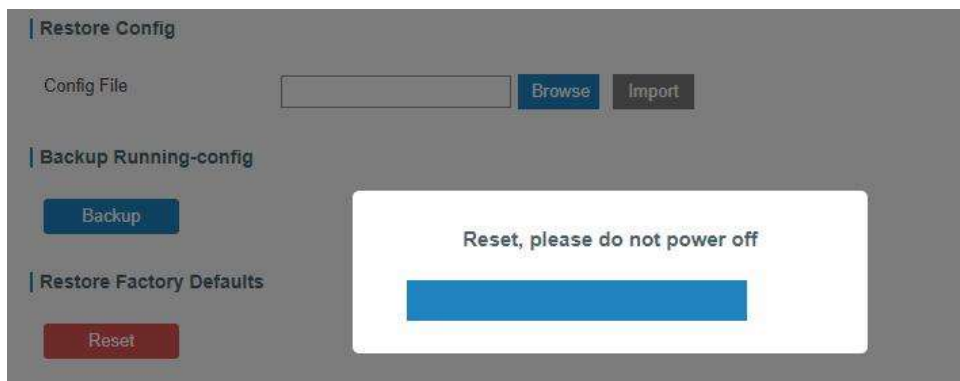

4.1.1 Via Web Interface

1. Log in web interface, and go to "Maintenance > Backup and Restore".
2. Click "Reset" button under the "Restore Factory Defaults".

You will be asked to confirm if you'd like to reset it to factory defaults. Then click "Reset" button.

Then the router will reboot and restore to factory settings immediately.

Please wait till the SYSTEM LED blinks slowly and login page pops up again, which means the router has already been reset to factory defaults successfully.

Related Topic

[Restore Factory Defaults](#)

4.2.2 Via Hardware

Locate the reset button on the router, and take corresponding actions based on the status of SYSTEM LED.

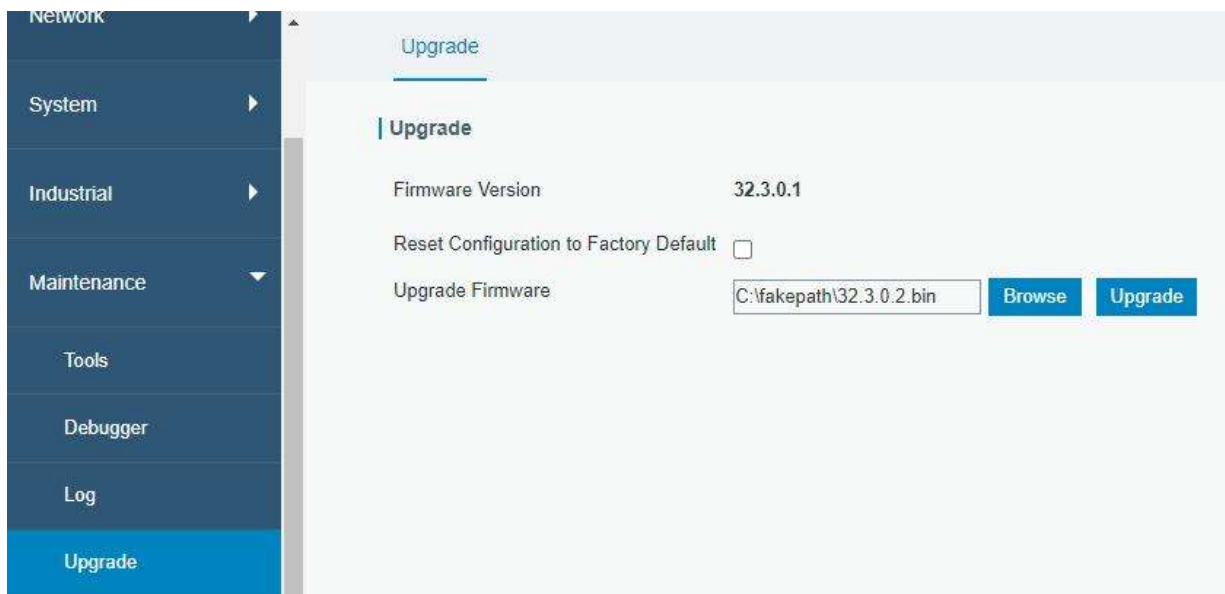

SYSTEM LED	Action
Blinking	Press and hold the reset button for more than 5 seconds.
Static Green → Rapidly Blinking	Release the button and wait.
Off → Blinking	The router is now reset to factory defaults.

4.2 Firmware Upgrade

It is suggested that you contact Milesight technical support first before you upgrade router firmware. After getting firmware file please refer to the following steps to complete the upgrade.

1. Go to "Maintenance > Upgrade".
2. Click "Browse" and select the correct firmware file from the PC.
3. Click "Upgrade" and the router will check if the firmware file is correct. If it's correct, the firmware will be imported to the router, and then the router will start to upgrade.

Note: It is recommended to check the box of Reset Configuration to Factory Default before upgrade.

Related Topic

4.3 Events Application Example

Example

In this section, we will take an example of sending alarm messages by email when the following events occur and recording the event alarms on the Web GUI.

Events	Actions to make events occur (for test)
Router system start up.	Plug the power supply of the router.
Router system time update.	Set up system time manually.

Configuration Steps

1. Go to "System > Events > Events Settings" and enable Event settings.
2. Check corresponding events for record and email alarm, and then click "Save" button as below.

The screenshot shows the 'Events Settings' page. Under 'Events Settings', the 'Enable' checkbox is checked. 'Phone Group List' is an empty dropdown, and 'Email Group List' is set to '1'. Below this is a table with columns: Events, Record, Email Email Setting, SMS SMS Setting, and SNMP.

Events	Record	Email Email Setting	SMS SMS Setting	SNMP
System Startup	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
System Reboot	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
System Time Update	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

3. Configure the corresponding parameters including email sending settings and email groups as below. Click "Save" and "Apply" button to make the changes take effect.

The screenshot shows the 'SMTP Client Settings' page. The 'Enable' checkbox is checked. The 'Email Address' field contains 'contact@milesight.com', 'Password' is masked with dots, 'SMTP Server Address' is 'smtp.milesight.com', 'Port' is '25', and 'Encryption' is set to 'STARTTLS'. A blue 'Test' button is located at the bottom.

Email List

Email Address	Description	Operation
iot.contact@milesight.com	support	

Email Group List

Group ID	Description	Email Address	Operation
1	support	iot.contact@milesight.com	

4. To test the functionality of Alarm, please take the corresponding actions listed above. It will send an alarm e-mail to you when the relevant event occurs. Refresh the web GUI, go to “Events > Events”, and you will find the events records.

Events Events Settings

	Status	Type	Time	Message
<input type="checkbox"/>	Unread	System Time Update	2019-05-15 09:39:08	system time update
<input type="checkbox"/>	Unread	System Startup	2019-05-09 11:48:25	system startup

4.4 SNMP Application Example

Before you configure SNMP parameters, please download the relevant “MIB” file from the UR32’s WEB GUI first, and then upload it to any software or tool which supports standard SNMP protocol. Here we take “ManageEngine MibBrowser Free Tool” as an example to access the router to query cellular information.

- Go to “System > SNMP > MIB” and download the MIB file “LTE-ROUTER-MIB.txt” to PC.

System

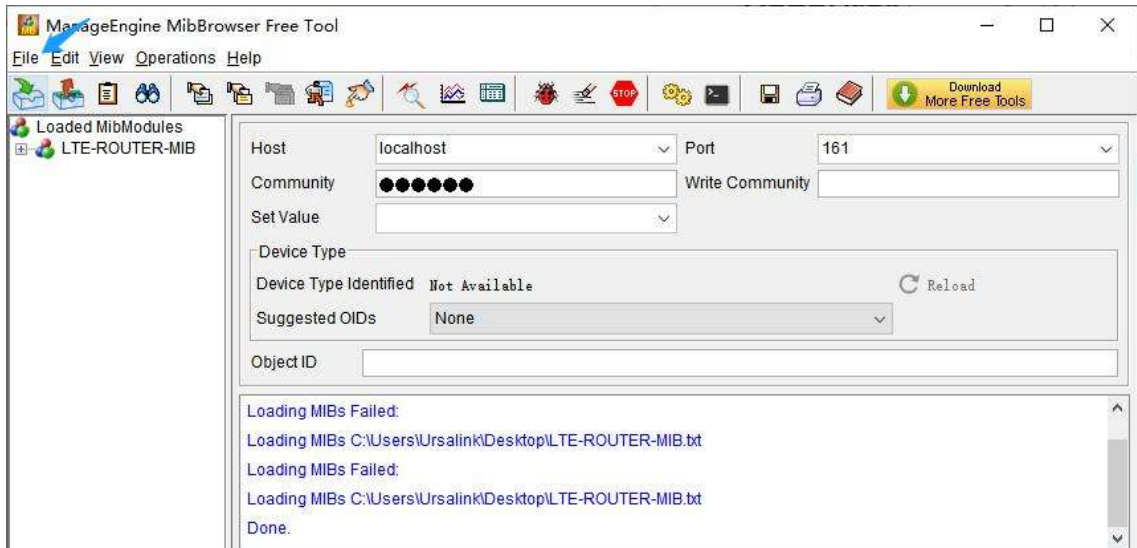

- General Settings
- Phone & SMS
- User Management
- SNMP**
- AAA

SNMP MIB View VACM Trap MIB

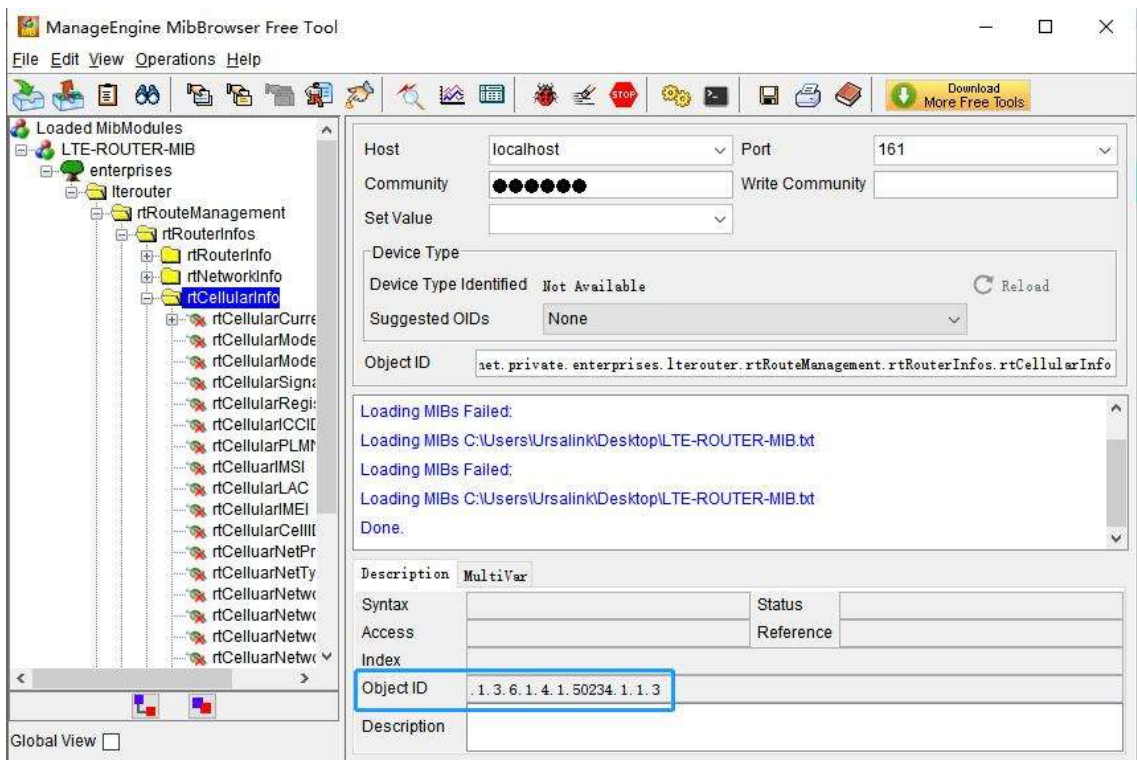

MIB Download

MIB File

- Start “ManageEngine MibBrowser Free Tool” on the PC. Click “File > Load MIB” on the menu bar. Then select “LTE-ROUTER-MIB.txt” file from PC and upload it to the software.

Click the “+” button beside “LTE-ROUTER-MIB”, which is under the “Loaded MibModules” menu, and find “usCellularinfo”. And then you will see the OID of cellular info is “.1.3.6.1.4.1.50234”, which will be filled in the MIB View settings.

- Go to “System > SNMP > SNMP” on the router’s WEB GUI. Check “Enable” option, then click “Save” button.

SNMP MIB View VACM Trap MIB

SNMP Settings

Enable

Port

SNMP Version

Location Information

Contact Information

Save

4. Go to "System > SNMP > MIB View". Click  to add a new MIB view and define the view to be accessed from the outside network. Then click "Save" button.

SNMP MIB View VACM Trap MIB

View List

View Name	View Filter	View OID	Operation
<input type="text" value="cellular"/>	<input type="text" value="Included"/>	<input type="text" value="1.3.6.1.4.1.50234.1.3"/>	<input checked="" type="button" value="X"/>
			<input type="button" value="+"/>

Save

5. Go to "System > SNMP > VACM". Click  to add a new VACM setting to define the access authority for the specified view from the specified outside network. Click "Save" and "Apply" to make the changes take effect.

SNMP MIB View VACM Trap MIB

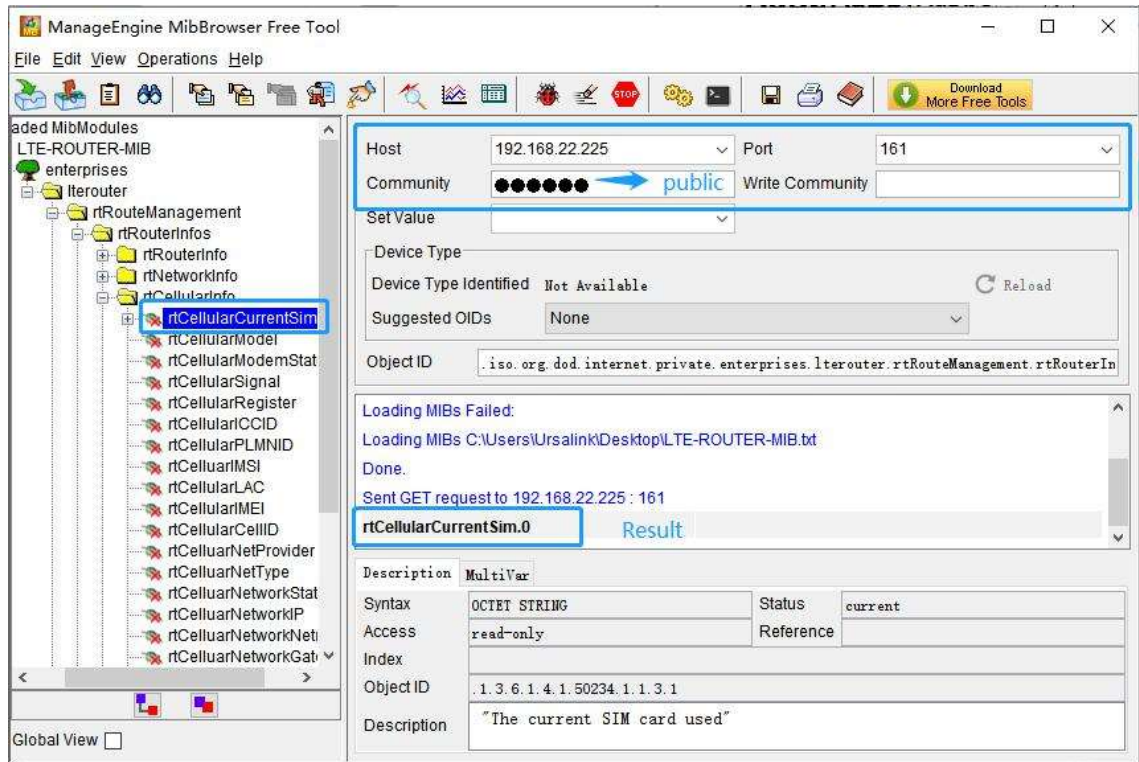

SNMP v1 & v2 User List

Community	Permission	MIB View	Network	Operation
<input type="text" value="public"/>	<input type="text" value="Read-Write"/>	<input type="text" value="cellular"/>	<input type="text" value="0.0.0.0/0"/>	<input checked="" type="button" value="X"/>
				<input type="button" value="+"/>

Save

6. Go to MibBrowser, enter host IP address, port and community. Right click "usCellular CurrentSim"

and then click “FET”. Then you will get the current SIM info on the result box. You can get other cellular info in the same way.

4.5 Network Connection

4.5.1 Cellular Connection

The UR32 routers have two cellular interfaces, named SIM1 & SIM2. Only one cellular interface is active at one time. If both cellular interfaces are enabled, SIM1 interface takes precedence as default.

Example

We are about to take an example of inserting a SIM card into SIM1 slot of the UR32 and configuring the router to get Internet access through cellular.

Configuration Steps

1. Go to “Network > Interface > Cellular > Cellular Setting” and configure the cellular info.

Cellular Settings

	SIM1	SIM2
Protocol Type	IPv4	IPv4
APN		
Username		
Password		
PIN Code		
Access Number		
Authentication Type	Auto	Auto
Network Type	Auto	Auto
PPP Preferred	<input type="checkbox"/>	<input type="checkbox"/>
SMS Center		
Enable NAT	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

Click “Save” and “Apply” for configuration to take effect.

- Go to “Network > Interface > Link Failover” to enable correspond SIM and change link priority.

Priority	Enable Rule	Link in use	Interface	Connection Type	IP	Operation
1	<input checked="" type="checkbox"/>	<input type="radio"/>	Cellular-SIM1	-	-	
2	<input checked="" type="checkbox"/>	<input type="radio"/>	Cellular-SIM2	DHCP	-	
3	<input checked="" type="checkbox"/>	<input checked="" type="radio"/>	WAN	Static IP	192.168.22.225	

- Click to configure ICMP ping detection information.

Ping Detection

Enable

IPv4 Primary Server

IPv4 Secondary Server

IPv6 Primary Server

IPv6 Secondary Server

Interval s

Retry Interval s

Timeout s

Max Ping Retries

4. Check the cellular connection status by WEB GUI of router.

Click "Status > Cellular" to view the status of the cellular connection. If it shows 'Connected', SIM1 has dialed up successfully.

Overview	Cellular	Network	WLAN	VPN	Routing	Host List	GPS
Modem				Network			
Model	EC20F	Status	Connected

Cell ID	3d98485						

5. Check out if network works properly by browser on PC.

Open your preferred browser on PC, type any available web address into address bar and see if it is able to visit Internet via the UR32 router.

Related Topic

[Cellular Setting](#)

[Cellular Status](#)

4.5.2 Ethernet WAN Connection

Example

WAN port of the UR32 is connected with Ethernet cable to get Internet access.

Configuration Steps

- Go to "Network > Interface > WAN" to select connection type and configure WAN parameters. The following examples of static IP type, DHCP Client type, and PPPoE type are listed for your reference.

Note: if you select PPPoE type, please check the "Username" & "Password" with your local ISP.

Click "Save & Apply" button to make the changes take effect.

The screenshot shows the configuration page for WAN_1. The left sidebar contains a menu with 'Interface' selected. The main content area has tabs for 'Link Failover', 'Cellular', 'Port', 'WAN', 'Bridge', and 'Switch'. The 'WAN' tab is active, displaying a form for WAN_1 configuration. A blue box highlights the 'Enable' checkbox (checked), 'Port' dropdown (LAN1/WAN), 'Connection Type' dropdown (Static IP), 'IPv4 Address' (192.168.22.225), 'Netmask' (255.255.255.0), 'IPv4 Gateway' (192.168.22.1), 'IPv6 Address' (fe80::26e1:24ff:fe0:3192), 'Prefix-length' (64), 'IPv6 Gateway' (empty), 'MTU' (1500), 'Primary DNS' (8.8.8.8), 'Secondary DNS' (empty), and 'Enable NAT' checkbox (checked).

2. Go to “Network > Interface > Link Failover” to change the WAN priority to 1.

The screenshot shows the 'Link Priority' configuration page. The left sidebar has 'Link Failover' selected. The main content area has tabs for 'Link Failover', 'Cellular', 'Port', 'WAN', 'Bridge', 'Switch', and 'Loopback'. The 'Link Failover' tab is active, displaying a table with the following data:

Priority	Enable Rule	Link in use	Interface	Connection Type	IP	Operation
1	<input checked="" type="checkbox"/>	●	WAN	Static IP	192.168.22.225	✎ ↑ ↓
2	<input checked="" type="checkbox"/>	●	Cellular-SIM1	DHCP	-	✎ ↑ ↓
3	<input checked="" type="checkbox"/>	●	Cellular-SIM2	-	-	✎ ↑ ↓

4.6 Wi-Fi Application Example (Only Applicable to Wi-Fi Version)

4.6.1 AP Mode

Application Example

Configure UR32 as AP to allow connection from users or devices.

Configuration Steps

1. Go to “Network > Interface > WLAN” to configure wireless parameters as below.

Link Failover	Cellular	Port	WAN	Bridge	WLAN
WLAN					
Enable	<input checked="" type="checkbox"/>				
Work Mode	AP				
BSSID	24:e1:24:f0:2f:eb				
Radio Type	802.11n(2.4GHz)				
Channel	Auto				
Bandwidth	20MHz				
SSID	Router_F02FEB				
Encryption Mode	WPA-PSK/WPA2-PSK				
Cipher	Auto				
Key	*****				
SSID Broadcast	<input checked="" type="checkbox"/>				
AP Isolation	<input type="checkbox"/>				
Guest Mode	<input type="checkbox"/>				
Max Client Number	10				

Click “Save” and “Apply” button after all configurations are done.

2. Use a smart phone to connect the access point of UR32. Go to “Status > WLAN”, and you can check the AP settings and information of the connected client/user.

WLAN Status					
Name	Status	Type	SSID	IP Address	Netmask
WLAN	Running	AP	Router_F02FEB	192.168.1.1	255.255.255.0

Associated Stations			
SSID	MAC Address	IP Address	Connection Duration
Router_F02FEB	3c:cd:5d:47:10:8e	192.168.1.191	18 seconds

4.6.2 Client Mode

Application Example

Configure UR32 as Wi-Fi client to connect to an access point to have Internet access.

Configuration Steps

1. Go to “Network > Interface > WLAN” to configure wireless as below.

The screenshot shows the WLAN configuration page with the following settings:

- Enable:
- Work Mode: Client (dropdown menu)
- SSID: WIFI TEST
- BSSID: 3c:cd:5d:47:10:8e
- Encryption Mode: WPA2-PSK (dropdown menu)
- Cipher: AES (dropdown menu)
- Key:
- IP Setting: DHCP Client (dropdown menu)

Click “Save” and “Apply” button after all configurations are done.

2. Go to “Status > WLAN”, and you can check the connection status of the client.

The screenshot shows the WLAN Status page with the following information:

WLAN Status

Name	Status	Type	SSID	IP Address	Netmask
WLAN	Connected	Client	WIFI TEST		

Associated Stations

SSID	MAC Address	IP Address	Connection Duration
WIFI TEST	3c:cd:5d:47:10:8e		1353 seconds

4.7 VRRP Application Example

Application Example

A Web server requires Internet access through the UR32 router. To avoid data loss caused by router breakdown, two UR32 routers can be deployed as VRRP backup group, so as to improve network reliability.

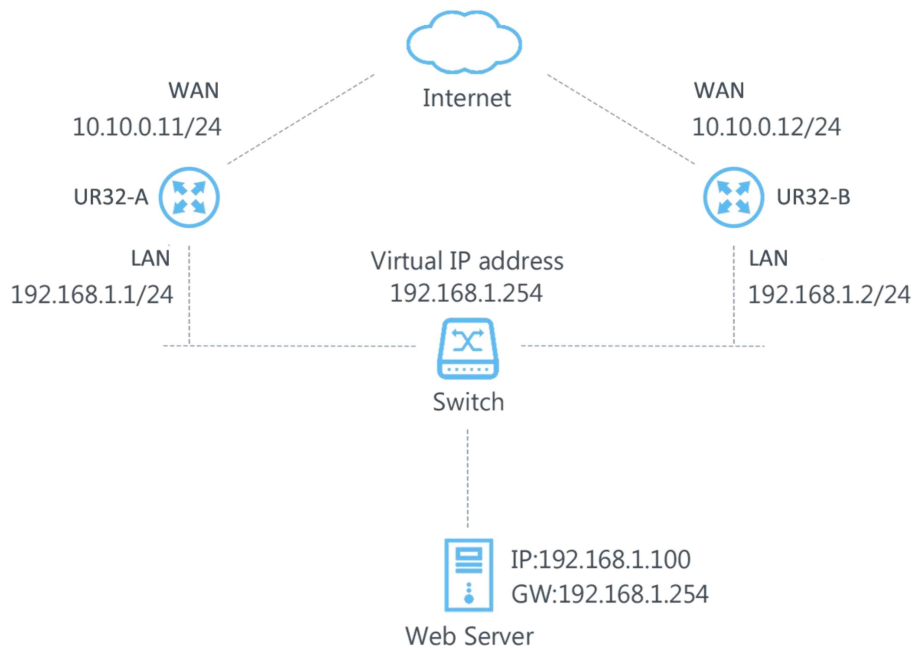

VRRP group:

WAN ports of the UR32 Router A and Router B are connected to the Internet via wired network. And LAN ports of them are connected to a switch.

Virtual IP is 192.168.1.254/24.

UR32 Router	Virtual Router ID (Same for A and B)	Port connected with switch	LAN IP Address	Priority	Preemption Mode
A	1	LAN2	192.168.1.1	110	Enable
B	1	LAN2	192.168.1.2	100	Disable

Refer to the topological below.

Configuration Steps

Router A Configuration

1. Go to "Network > Interface > WAN" and configure wired WAN connection as below.

Link Failover Cellular Port **WAN** Bridge

WAN Settings

— WAN_1

Enable	<input checked="" type="checkbox"/>
Port	LAN1/WAN
Connection Type	Static IP
IPv4 Address	10.10.0.11
Netmask	255.255.255.0
IPv4 Gateway	10.10.0.1
IPv6 Address	fe80::26e1:24ff:fe0:3192
Prefix-length	64
IPv6 Gateway	
MTU	1500
Primary DNS	8.8.8.8
Secondary DNS	
Enable NAT	<input checked="" type="checkbox"/>

- Go to “Network > VRRP > VRRP” and configure VRRP parameters as below.

Status

Network

Interface

DHCP

Firewall

QoS

VPN

IP Passthrough

Routing

VRRP

DDNS

System

VRRP

VRRP Status

Status DISABLE

VRRP Settings

Enable	<input checked="" type="checkbox"/>
Interface	Bridge0
Virtual Router ID	1
Virtual IP	192.168.1.254
Priority	110
Advertisement Interval (s)	1
Preemption Mode	<input type="checkbox"/>
IPv4 Primary Server	8.8.8.8
IPv4 Secondary Server	114.114.114.114
Interval	300 s
Retry Interval	5 s
Timeout	3 s
Max Ping Retries	3

Router B Configuration

1. Go to “Network > Interface > WAN” and configure wired WAN connection as below.

The screenshot shows the WAN Settings configuration page for WAN_1. The page has tabs for Link Follower, Cellular, Port, WAN (selected), and Bridge. The WAN Settings section includes the following fields:

Field	Value
Enable	<input checked="" type="checkbox"/>
Port	LAN1/WAN
Connection Type	Static IP
IPv4 Address	10.10.0.12
Netmask	255.255.255.0
IPv4 Gateway	10.10.0.1
IPv6 Address	fe80::26e1:24ff:fe0:3192
Prefix-length	64
IPv6 Gateway	
MTU	1500
Primary DNS	8.8.8.8
Secondary DNS	
Enable NAT	<input checked="" type="checkbox"/>

2. Go to “Network > VRRP > VRRP” and configure VRRP parameters as below.

The screenshot shows the VRRP Settings configuration page. The left sidebar has a menu with the following items: Status, Network, Interface, DHCP, Firewall, QoS, VPN, IP Passthrough, Routing, VRRP (selected), DDNS, and System. The VRRP Settings section includes the following fields:

Field	Value
Status	DISABLE
Enable	<input checked="" type="checkbox"/>
Interface	Bridge0
Virtual Router ID	1
Virtual IP	192.168.1.254
Priority	100
Advertisement Interval (s)	1
Preemption Mode	<input type="checkbox"/>
IPv4 Primary Server	8.8.8.8
IPv4 Secondary Server	114.114.114.114
Interval	300 s
Retry Interval	5 s
Timeout	3 s
Max Ping Retries	3

Once you complete all configurations, click “Apply” button on the top-right corner to make changes take effect.

Result: normally, A is the master router, used as the default gateway. When the power of Router A is down or Router A suffers from failure, Router B will become the master router, used as the default gateway. With Preemption Mode enabled, Router A will be master and Router B will demote back to be the backup once Router A can access the Internet again.

4.8 NAT Application Example

Example

An UR32 router can access Internet via cellular. LAN port is connected with a Web server whose IP address is 192.168.1.2 and port is 8000. Configure the router to make public network access the server.

Configuration Steps

Go to “Firewall > Port Mapping” and configure port mapping parameters.

The screenshot shows the Milesight web interface for configuring Port Mapping. The interface includes a sidebar with navigation options: Status, Network, Interface, DHCP, Firewall (selected), and QoS. The main content area shows the Port Mapping configuration page. The page title is "Port Mapping" and it includes a "Save" button and an "Apply" button. The configuration table has the following columns: Source IP, Source Port, Destination IP, Destination Port, Protocol, Description, and Operation. A row is added with the following values: Source IP: 0.0.0.0/0, Source Port: 8000, Destination IP: 192.168.1.2, Destination Port: 800, Protocol: TCP, and Description: (empty). The Operation column contains a plus sign (+) and a minus sign (-) icon.

Click “Save” and “Apply” button.

4.9 Access Control Application Example

Application Example

LAN port of the UR32 is set with IP 192.168.1.0/24. Then configure the router to deny accessing to Google IP 172.217.160.100 from local device with IP 192.168.1.12.

Configuration Steps

- Go to "Network > Firewall > ACL" to configure access control list. Click "+" button to set parameters as below. Then click "Save" button.

The screenshot shows the 'ACL Setting' page with the following configuration:

- Default Filter Policy: Accept
- Access Control List:
 - Type: extended
 - ID: 100
 - Action: deny
 - Protocol: ip
 - Source IP: 192.168.1.12
 - Source Wildcard Mask: 0.0.0.255
 - Destination IP: 172.217.160.100
 - Destination Wildcard Mask: 0.0.0.255
 - Description: google

Buttons: Save, Cancel

- Configure interface list. Then click "Save" and "Apply" button.

The screenshot shows the 'ACL Setting' page with the following configuration:

- Default Filter Policy: Accept
- Access Control List:

ID	Action	Protocol	Source IP	Destination IP	More Detail	Description	Operation
100	deny	ip	192.168.1.12/0.0.0.255	172.217.160.100/0.0.255		google	
- Interface List:

Interface	In ACL	Out ACL	Operation
Bridge0	100

4.10 QoS Application Example

Example

Configure the UR32 router to distribute local preference to different FTP download channels. The total download bandwidth is 75000 kbps.

Note: the “Total Download Bandwidth” should be less than the real maximum bandwidth of WAN or cellular interface.

FTP Server IP & Port	Percent	Max Bandwidth(kbps)	Min Bandwidth(kbps)
110.21.24.98:21	40%	30000	25000
110.32.91.44:21	60%	45000	40000

Configuration Steps

1. Go to “Network > QoS > QoS(Download)” to enable QoS and set the total download bandwidth.

2. Please find “Service Category” option, and click “+” to set up service classes.

Note: the percents must add up to 100%.

Name	Percent(%)	Max BW(kbps)	Min BW(kbps)	Operation
1	40	30000	25000	x
2	60	45000	40000	x

3. Please find “Service Category Rules” option, and click “+” to set up rules.

Name	Source IP	Source Port	Destination IP	Destination Port	Protocol	Service Category	Operation
ftp1	110.21.24.98	21			ANY	1	x
ftp2	110.32.91.44	21			ANY	2	x

Note:

IP/Port: null refers to any IP address/port.

Click “Save” and “Apply” button.

4.11 DTU Application Example

Example

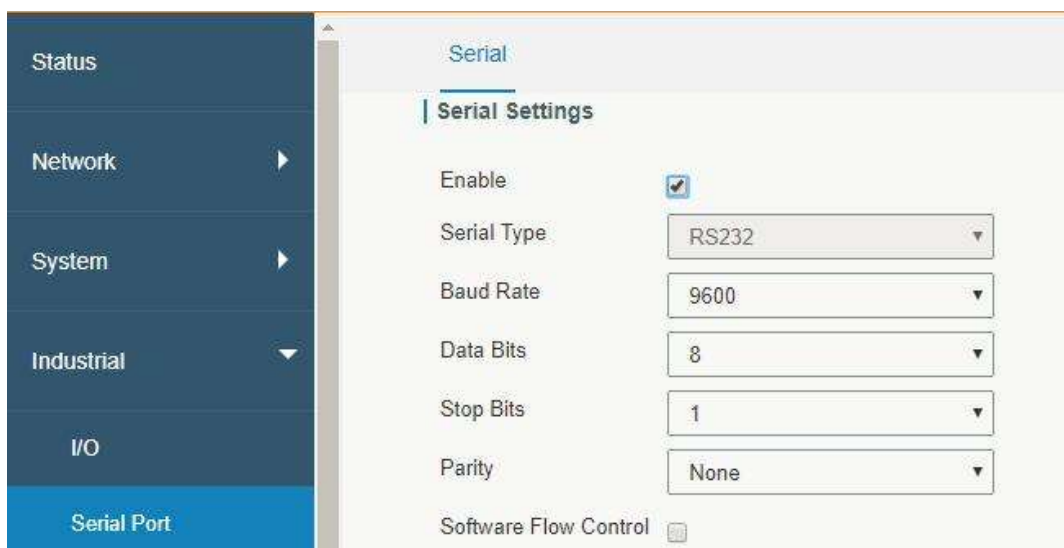

PLC is connected with the UR32 via RS232. Then enable DTU function of the UR32 to make a remote TCP server communicate with PLC. Refer to the following topological graph.

Serial Parameters of the PLC	
Baud Rate	9600
Data Bit	8
Stop Bit	1
Parity	None

Configuration Steps

1. Go to "Industrial > Serial Port > Serial" and configure serial port parameters. The serial port parameter shall be kept in consistency with those of PLC, as shown in figure below.

- Configure Serial Mode as "DTU Mode". The UR32 is connected as client in "Transparent" protocol.

The screenshot shows the configuration page for the Serial Port. On the left is a navigation menu with options: System, Industrial, I/O, Serial Port (selected), Modbus TCP, GPS, and Maintenance. The main configuration area includes the following settings:

- Serial Mode: DTU Mode
- DTU Protocol: Transparent
- Protocol: TCP
- Keepalive Interval: 75 s
- Keepalive Retry Times: 9
- Packet Size: 1024 Bytes
- Serial Frame Interval: 100 ms
- Reconnect Interval: 10 s
- Specific Protocol:
- Register String: modem1

- Configure TCP server IP and port.

The screenshot shows the "Destination IP Address" configuration table. It has columns for Server Address, Server Port, Status, and Operation. A single entry is shown with Server Address 110.87.98.58 and Server Port 7087. The Status column is empty, and the Operation column contains a minus sign icon. A "Save" button is located below the table.

Server Address	Server Port	Status	Operation
110.87.98.58	7087		-

- Once you complete all configurations, click "Save" and "Apply" button.

The screenshot shows the "Destination IP Address" configuration table after saving. The Status column now displays "Connected" in green text. The Operation column still contains the minus sign icon.

Server Address	Server Port	Status	Operation
110.87.98.58	7087	Connected	-

- Start TCP server on PC.

Take "Netassist" test software as example. Make sure port mapping is already done.

The screenshot shows the "Settings" dialog box for Netassist. It has the following fields:

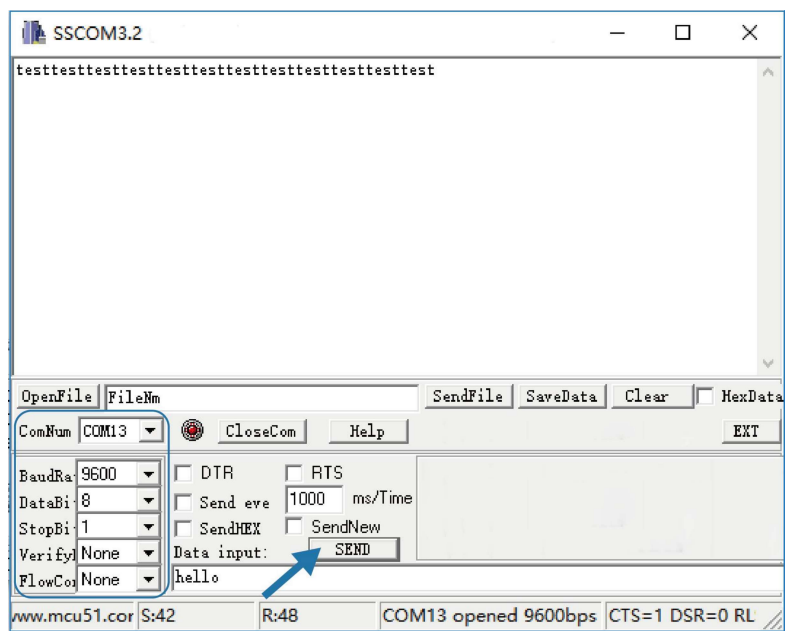

- (1) Protocol: TCP Server
- (2) Local host IP: 192.168.2.27
- (3) Local host port: 7087
- Disconnect button:

- Connect the UR32 to PC via RS232 for PLC simulation. Then start "sscom" software on the PC to test communication through serial port.

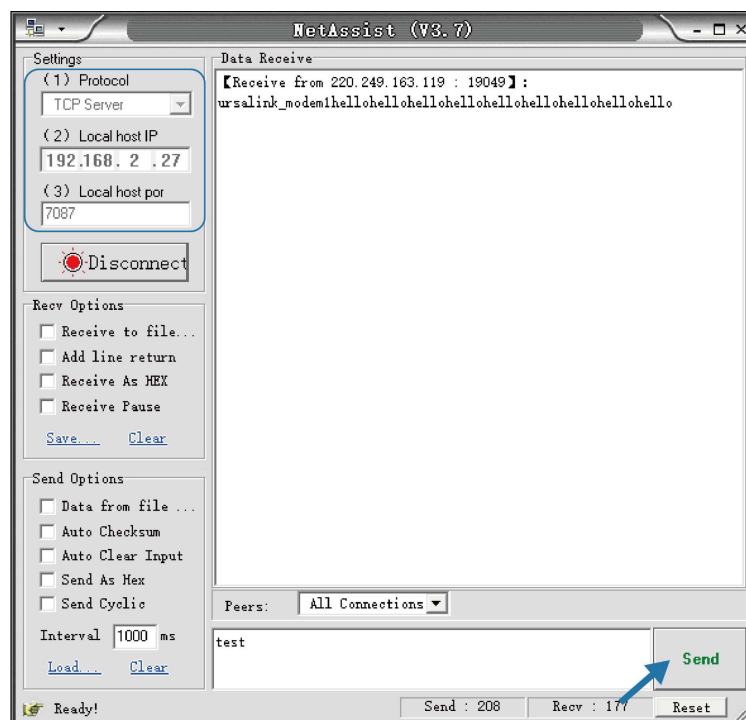

7. After connection is established between the UR32 and the TCP server, you can send data between sscocom and Netassist.

PC side

TCP server side

8. After serial communication test is done, you can connect PLC to RS232 port of the UR32 for test.

[Serial Port](#)

4.12 PPTP Application Example

Example

Configure the UR32 as PPTP client to connect to a PPTP server in order to have data transferred securely. Refer to the following topological graph.

Configuration Steps

1. Go to “Network > VPN > PPTP”, configure PPTP server IP address, username and password provided by PPTP server.

Note: If you want to have all data transferred through VPN tunnel, check “Global Traffic Forwarding” option.

The screenshot shows the PPTP configuration interface. The 'PPTP' tab is selected, and the 'PPTP Settings' section is expanded. The 'PPTP_1' configuration is shown with the following settings:

Setting	Value
Enable	<input checked="" type="checkbox"/>
Remote IP Address	110.87.98.58
Username	pptpserver
Password	*****
Authentication	Auto
Global Traffic Forwarding	<input type="checkbox"/>
Remote Subnet	
Remote Subnet Mask	
Advanced Settings	<input type="checkbox"/>

If you want to access peer subnet such as 192.168.3.0/24, you need to configure the subnet and mask to add the route.

Remote Subnet	<input type="text" value="192.168.3.0"/>
Remote Subnet Mask	<input type="text" value="255.255.255.0"/>

2. Check “Show Advanced” option, and you will see the advanced settings.

DMVPN	IPsec	GRE	L2TP	PPTP
				<input checked="" type="checkbox"/>
Show Advanced		<input checked="" type="checkbox"/>		
Local IP Address		<input type="text"/>		
Peer IP Address		<input type="text"/>		
Enable NAT		<input checked="" type="checkbox"/>		
Enable MPPE		<input type="checkbox"/>		
Address/Control Compression		<input type="checkbox"/>		
Protocol Field Compression		<input type="checkbox"/>		
Asyncmap Value		<input type="text" value="ffffff"/>		
MRU		<input type="text" value="1500"/>		
MTU		<input type="text" value="1500"/>		
Link Detection Interval (s)		<input type="text" value="60"/>		
Max Retries		<input type="text" value="0"/>		
Expert Options		<input type="text"/>		

If the PPTP server requires MPPE encryption, then you need to check “Enable MPPE” option.

Enable MPPE

If the PPTP server assigns fixed tunnel IP to the client, then you can fill in the local tunnel IP and remote tunnel IP, shown as below.

Local IP Address	<input type="text" value="205.205.0.100"/>
Peer IP Address	<input type="text" value="205.205.0.1"/>

Otherwise PPTP server will assign tunnel IP randomly.

Click “Save” button when you complete all settings, and then the advanced settings will be hidden again. Then click “Apply” button to have the configurations take effect.

3. Go to “Status > VPN” and check PPTP connection status.

PPTP is established as shown below.

Local IP: the client tunnel IP.

Remote IP: the server tunnel IP.

The screenshot shows the Milesight IoT management interface. The left sidebar contains a menu with 'Status' selected, and sub-items for 'Network', 'System', and 'Industrial'. The main content area has a top navigation bar with tabs for 'Overview', 'Cellular', 'Network', 'WLAN', 'VPN', 'Routing', 'Host List', and 'GPS'. The 'VPN' tab is active, displaying a 'Clients' section with a table of VPN client information.

Name	Status	Local IP	Remote IP
pptp_1	Connected	120.205.0.100	205.205.0.1/32
ipsec_1	Disconnected	-	-
