## Wireless Activity Event Counter

---

### Overview

The device detects the number of movements or vibrations (such as detecting the motor a few times a day), the maximum number of movements or vibrations can reach  $2^{32}$  times (theoretical value), and sends the information of the number of movements or vibrations to the gateway for processing. Apply SX1276 wireless communication module.

### Main characteristics

- Adopt SX1276 wireless communication module
- 2 sections of 3.0 V CR2450 battery
- Compatible with LoRaWAN protocol
- Vibration counter detection
- Support frequency hopping spread spectrum technology
- Through third-party software platforms, sensor settings can be configured, data can be read, and alerts can be set via SMS text and email (optional)
- Applicable to third-party platforms: Actility/ThingPark, TTN, MyDevices/Cayenne
- Low power consumption and long battery life

Note:

Battery life is determined by the sensor reporting frequency and other variables.
