Wireless Emergency Button

General Description

The R313MA is a wireless emergency button that detects after pressing the emergency button and sends an alarm message to the gateway.

It uses the SX1276 wireless communication module.

Principle of Operation

When the emergency button is pressed, the IO port of the module detects a low level, and when the emergency button is released, the IO port of the module detects a high level.

Main Characteristics

- 2 sections of 3.0V CR2450 batteries in parallel
- Apply SX1276 wireless communication module
- Simple operation, no wiring required
- Comes with key ring for easy fixing and carrying
- LoRaWAN™ Class A compatible
- Frequency Hopping Spread Spectrum (FHSS)
- Third-Party online wireless sensor monitoring and notification system to configure sensors, view data and set alerts via SMS text and email (optional)
- Available third-party platform: Actility/ThingPark, TTN, MyDevices/Cayenne
- Low power consumption and long battery life

Note*:

Battery life is determined by the sensor reporting frequency and other variables .
